

RMH CAPITAL

Development proposal for a corporate and investment banking platform

Investment Banking / Markets / Corporate Finance / RMH Intelligence

A phased, advice-led and capital-light model designed for founder-led digital-economy clients.

JUNE 19, 2026

200-PAGE BOARD BOOK | ILLUSTRATIVE MANAGEMENT PROPOSAL

THE BOARD ASK

Authorize a capped 120-day validation and build phase - with a second vote required before regulated launch.

The board decision

Authorize a phased build of RMH Capital with explicit gates, delegated authority and a capped initial investment.

- BUILD**
Approve Phase 0 and Phase 1: formation, licensing preparation, founding hires, initial advisory mandates and the RMH Intelligence foundation.
- GUARDRAIL**
No regulated activity before required registrations, memberships, supervisory procedures and qualified personnel are in place.
- BOARD MEASURE**
Board-approved budget, named executive sponsor, monthly gate dashboard and independent legal assessment.

OPERATING VIEW | ILLUSTRATIVE

Measure	Limit	Owner	Status
Capital deployed	Green	CEO	ON TRACK
Regulatory gates	Amber	CRO	WATCH
Founding hires	Red	COO	GATE
Pipeline quality	N/A	CFO	READY
Control readiness	Green	CCO	OPEN

Every product must earn the right to scale through client demand, control readiness and positive unit economics.

The proposed franchise

A sector-led corporate and investment banking platform can connect RMH companies, partners and external clients to advice, capital and markets.

● BUILD

Organize around Investment Banking, Markets, Corporate Finance and RMH Intelligence, supported by independent control functions.

● GUARDRAIL

Maintain legal and operational separation between advisory, distribution, principal risk and the broader RMH ecosystem.

● BOARD MEASURE

Revenue mix, client concentration, recurring advisory share and cross-division collaboration.

OPERATING VIEW | ILLUSTRATIVE

Every product must earn the right to scale through client demand, control readiness and positive unit economics.

The strategic wedge

RMH should enter through founder-led technology, gaming, media and digital infrastructure clients that value domain fluency over balance-sheet scale.

- BUILD**
Win with senior attention, proprietary operating insight, rapid execution and an integrated finance-and-technology experience.
- GUARDRAIL**
Avoid competing for commodity mandates that require a large lending book, global trading inventory or mass-market distribution.
- BOARD MEASURE**
Win rate in target sectors, senior coverage ratio, repeat mandates and referral share.

OPERATING VIEW | ILLUSTRATIVE

Every product must earn the right to scale through client demand, control readiness and positive unit economics.

The launch sequence

The safest route is advisory first, private capital formation second and agency-oriented markets capabilities only after controls mature.

BUILD

Sequence formation, licenses, M&A; and capital advisory, private placements, research/distribution and later agency execution.

GUARDRAIL

Do not take custody, accept deposits, self-clear, lend from the balance sheet or run proprietary trading at launch.

BOARD MEASURE

Gate completion, first mandate timing, regulatory milestones and zero unauthorized activity.

OPERATING VIEW | ILLUSTRATIVE

Every product must earn the right to scale through client demand, control readiness and positive unit economics.

Illustrative economics

A focused franchise can reach operating break-even without replicating the fixed-cost base of a universal bank.

- BUILD**
Fund a 24-person launch team, build reusable technology and scale compensation and infrastructure with revenue visibility.
- GUARDRAIL**
Treat all projections as management scenarios; refresh quarterly against pipeline conversion, hiring and regulatory timing.
- BOARD MEASURE**
Illustrative: \$4.5M Year 1 revenue, \$31M Year 3, \$76M Year 5 and break-even during Year 3.

OPERATING VIEW | ILLUSTRATIVE

Every product must earn the right to scale through client demand, control readiness and positive unit economics.

The client promise

Clients should experience one senior team, one secure data environment and one coherent path from strategic question to capital solution.

- BUILD**
Pair sector bankers with corporate finance practitioners and a digital client workspace that preserves context across engagements.
- GUARDRAIL**
Use consent-based data sharing, strict need-to-know access and conflict controls across each client journey.
- BOARD MEASURE**
Net promoter score, client effort, cycle time, repeat engagement and secure portal adoption.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Every product must earn the right to scale through client demand, control readiness and positive unit economics.

The principal risks

The largest early risks are regulatory perimeter errors, conflicts, weak supervision, key-person dependence and overbuilding ahead of demand.

- BUILD**
Install independent compliance, risk and finance leadership early; use activity inventories and product approval before launch.
- GUARDRAIL**
Compensation and growth targets must never override suitability, disclosure, books-and-records or information-barrier obligations.
- BOARD MEASURE**
Open issues, policy exceptions, complaints, surveillance alerts and concentration limits.

OPERATING VIEW | ILLUSTRATIVE

Every product must earn the right to scale through client demand, control readiness and positive unit economics.

The recommended board action

Approve the concept subject to a 120-day validation sprint and a formal go/no-go package.

● BUILD

Mandate client interviews, licensing counsel, partner diligence, founding-team recruiting and a revised five-year plan.

● GUARDRAIL

Release capital in tranches only after evidence is delivered and the Board Risk & Conduct Committee confirms readiness.

● BOARD MEASURE

120-day deliverables completed; decision memo includes downside case and wind-down plan.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Every product must earn the right to scale through client demand, control readiness and positive unit economics.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve a \$7.5M capped Phase 0/1 envelope.
- O2** Authorize recruitment of the founding CEO and control leaders.
- O3** Require a board re-approval before regulated launch or principal risk-taking.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Every product must earn the right to scale through client demand, control readiness and positive unit economics.

O2 Strategic rationale

CHAPTER

RMH Capital is compelling only if it strengthens the wider RMH platform while standing as a credible, independently governed financial-services business.

O1

Translate ecosystem knowledge into client value without exploiting privileged information.

O2

Create a durable relationship layer across capital, transactions and strategic finance.

O3

Preserve RMH Studios focus through a ring-fenced organization and milestone-based funding.

Why RMH can have a right to win

RMH understands digital products, communities, creators and emerging technology from an operator perspective.

● BUILD

Turn operating fluency into sharper diligence, better strategic framing and more credible access to sector participants.

● GUARDRAIL

Never represent ecosystem proximity as guaranteed access, preferential allocation or inside information.

● BOARD MEASURE

Mandates sourced from differentiated insight; client references citing sector expertise.

OPERATING VIEW | ILLUSTRATIVE

The franchise should compound trust, insight and distribution - not merely add a new logo to the RMH portfolio.

Ecosystem adjacency

Capital advice is adjacent to RMH publishing, media, tools, AI and community capabilities but requires distinct fiduciary and conduct standards.

BUILD

Define approved collaboration channels, referral protocols, information barriers and arm-length service agreements.

GUARDRAIL

Prohibit informal deal sharing, uncontrolled cross-selling and access to nonpublic portfolio data.

BOARD MEASURE

Documented referrals, approved data transfers, conflict reviews and service-level compliance.

OPERATING VIEW | ILLUSTRATIVE

The franchise should compound trust, insight and distribution - not merely add a new logo to the RMH portfolio.

Strategic option value

A narrow advisory platform creates future options in private markets, research, transaction banking partnerships and embedded finance.

● BUILD

Build modular legal entities and technology so later capabilities can be added without redesigning the core.

● GUARDRAIL

Each option requires a separate product approval, legal analysis, capital case and control assessment.

● BOARD MEASURE

Option value tracked against cost-to-enter, strategic fit and probability-weighted returns.

OPERATING VIEW | ILLUSTRATIVE

The franchise should compound trust, insight and distribution - not merely add a new logo to the RMH portfolio.

Relationship economics

Investment banking relationships can create multi-year revenue streams across M&A,, capital, treasury and strategic finance.

● BUILD

Assign relationship owners, institutionalize knowledge and plan annual client agendas rather than transaction-only coverage.

● GUARDRAIL

Protect clients from pressure selling and disclose material conflicts before advice is delivered.

● BOARD MEASURE

Revenue per relationship, products per client, retention and relationship profitability.

OPERATING VIEW | ILLUSTRATIVE

The franchise should compound trust, insight and distribution - not merely add a new logo to the RMH portfolio.

Brand extension logic

The RMH name can signal ambition and technology fluency, but financial credibility must be earned through people, process and outcomes.

- BUILD**
Use RMH Capital as a distinct endorsed brand with conservative claims, clear legal-entity disclosure and institutional presentation standards.
- GUARDRAIL**
No implication of bank status, insured deposits, guaranteed returns or regulatory approval beyond actual permissions.
- BOARD MEASURE**
Brand trust studies, disclosure accuracy, complaint rates and unaided client recognition.

OPERATING VIEW | ILLUSTRATIVE

The franchise should compound trust, insight and distribution - not merely add a new logo to the RMH portfolio.

Build versus partner

RMH should own advisory relationships and differentiated technology while partnering for balance-sheet and infrastructure-heavy capabilities.

● BUILD

Retain coverage, sector insight and corporate finance; partner for clearing, custody, lending, settlement and selected distribution.

● GUARDRAIL

Perform third-party risk management, contractual oversight and client disclosure for every critical provider.

● BOARD MEASURE

Owned margin, partner dependency, concentration, service quality and exit alternatives.

OPERATING VIEW | ILLUSTRATIVE

Market infrastructure

Partner execution

RMH intelligence

RMH advice

Client relationship

The franchise should compound trust, insight and distribution - not merely add a new logo to the RMH portfolio.

Focus discipline

The business must reject opportunities outside its sector, product, geographic and risk appetite until it has earned broader permissions.

● BUILD

Publish a positive list of approved products and clients, plus escalation rules for anything novel or cross-border.

● GUARDRAIL

Revenue pressure cannot substitute for product approval or qualified supervision.

● BOARD MEASURE

Out-of-appetite inquiries, declined mandates, exceptions and approval cycle time.

OPERATING VIEW | ILLUSTRATIVE

The franchise should compound trust, insight and distribution - not merely add a new logo to the RMH portfolio.

Strategic success definition

Success is a trusted boutique with repeat clients and scalable infrastructure - not immediate league-table breadth.

- BUILD**
Set five-year objectives around franchise quality, control maturity, profitability and talent density.
- GUARDRAIL**
Avoid vanity metrics such as announced deal value without fees, client outcomes or risk-adjusted returns.
- BOARD MEASURE**
Repeat revenue, senior productivity, EBITDA, regulatory outcomes and client advocacy.

OPERATING VIEW | ILLUSTRATIVE

Measure	Limit	Owner	Status
Repeat revenue	Green	CEO	ON TRACK
Client advocacy	Amber	CRO	WATCH
Control maturity	Red	COO	GATE
Talent density	N/A	CFO	READY
Risk-adjusted profit	Green	CCO	OPEN

The franchise should compound trust, insight and distribution - not merely add a new logo to the RMH portfolio.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Confirm the venture strengthens - rather than distracts from - RMH Studios.
- O2** Approve the build-partner boundary as a core strategic principle.
- O3** Define five-year success through trust, repeat relationships and risk-adjusted profit.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

The franchise should compound trust, insight and distribution - not merely add a new logo to the RMH portfolio.

O3 Market opportunity

CHAPTER

The opportunity is concentrated in clients underserved between small-business advisors and global banks: complex enough to need institutional advice, but too specialized for standardized coverage.

O1

Target a defined segment, not the entire banking market.

O2

Use sector cycles and private-market fragmentation to create high-value advisory moments.

O3

Underwrite the opportunity from bottom-up client economics rather than top-down market-size headlines.

The underserved middle

Founder-led and sponsor-backed digital businesses often outgrow generalist advisors before they qualify for top-tier global-bank attention.

- BUILD**
Offer senior-led M&A; capital and finance support to companies with approximately \$10M-\$1B enterprise value.
- GUARDRAIL**
Screen for governance readiness, source of funds, reputational risk and realistic transactionability.
- BOARD MEASURE**
Named-account universe, reachable fee pool, qualified pipeline and conversion by segment.

OPERATING VIEW | ILLUSTRATIVE

Market selection must connect addressable fees to named clients, realistic win rates and delivery capacity.

Private-market complexity

Longer private-company lifecycles increase demand for structured equity, secondary liquidity, tender offers and strategic capital planning.

● BUILD

Develop private-placement, shareholder-liquidity and capitalization advisory playbooks with specialist partners.

● GUARDRAIL

Apply securities-law, suitability, accredited-investor and placement-agent requirements before solicitation.

● BOARD MEASURE

Private-capital mandates, investor coverage depth, close rate and post-close cap-table quality.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Market selection must connect addressable fees to named clients, realistic win rates and delivery capacity.

M&A; cycle opportunity

Technology and media cycles create recurring consolidation, divestiture and capability-acquisition opportunities.

- BUILD**
Build buyer maps, sector theses and preparedness programs before companies enter formal sale processes.
- GUARDRAIL**
Control MNPI, conflicts, fairness, valuation support and buyer-contact permissions.
- BOARD MEASURE**
Preparedness engagements converted, buyer response, process duration and fee realization.

OPERATING VIEW | ILLUSTRATIVE

Market selection must connect addressable fees to named clients, realistic win rates and delivery capacity.

Capital formation gaps

Growth companies need advice that connects capital structure to product roadmap, burn, ownership and strategic control.

● BUILD

Provide equity, convertible, debt and strategic-investor alternatives with transparent trade-off analysis.

● GUARDRAIL

Do not recommend products without qualified analysis, placement permissions and conflict disclosure.

● BOARD MEASURE

Capital raised, dilution outcomes, runway extension and mandate conversion.

OPERATING VIEW | ILLUSTRATIVE

Market selection must connect addressable fees to named clients, realistic win rates and delivery capacity.

Sector transaction density

Gaming, creator platforms, software, AI and digital infrastructure share overlapping buyers, investors and operating issues.

BUILD

Organize sector pods around transaction themes and recurring decision-makers rather than broad industry taxonomies.

GUARDRAIL

Use documented research processes; separate public research, banking and confidential client information.

BOARD MEASURE

Active buyers, investors and prospects per theme; meeting-to-mandate conversion.

OPERATING VIEW | ILLUSTRATIVE

Market selection must connect addressable fees to named clients, realistic win rates and delivery capacity.

Fee-pool construction

RMH should size its market from a realistic portfolio of annual retainers, success fees, placements and finance subscriptions.

- BUILD**
Build account-level revenue cases with probability, timing, staffing and partner economics.
- GUARDRAIL**
Cap pipeline credit for unqualified conversations and exclude fees requiring unapproved activities.
- BOARD MEASURE**
Probability-weighted fees, backlog coverage, concentration and expected margin.

OPERATING VIEW | ILLUSTRATIVE

Retainers

M&A; fees

Placement fees

Finance subscriptions

Market selection must connect addressable fees to named clients, realistic win rates and delivery capacity.

Competitive white space

Global banks win scale and balance sheet; boutiques win senior attention; software platforms win speed - RMH can combine the latter two.

- **BUILD**
Position as an operator-informed, technology-enabled advisory platform with selective institutional partnerships.
- **GUARDRAIL**
Do not claim capabilities or geographic reach delivered solely through uncontracted third parties.
- **BOARD MEASURE**
Competitive win/loss reasons, fee realization and client-rated differentiation.

OPERATING VIEW | ILLUSTRATIVE

Traditional model

- Broad coverage
- Focused sectors
- Large hierarchy
- Senior ownership

RMH model

- Legacy workflow
- Digital workspace
- Balance-sheet pull
- Advice-led

Market selection must connect addressable fees to named clients, realistic win rates and delivery capacity.

Opportunity downside

The market can contract sharply, mandates can defer and fees can concentrate in a few senior bankers.

- **BUILD**

Use a variable-cost model, recurring corporate-finance revenue and staged hiring to absorb cycles.

- **GUARDRAIL**

Maintain liquidity and wind-down capacity independent of optimistic transaction assumptions.

- **BOARD MEASURE**

Downside runway, fixed-cost ratio, top-client concentration and deferred-deal exposure.

OPERATING VIEW | ILLUSTRATIVE

Market selection must connect addressable fees to named clients, realistic win rates and delivery capacity.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- 01** Approve a bottom-up addressable-market validation using named accounts.
- 02** Prioritize segments where senior advice and sector fluency outweigh balance-sheet scale.
- 03** Require downside economics that survive a prolonged transaction slowdown.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Market selection must connect addressable fees to named clients, realistic win rates and delivery capacity.

O4 Client and sector focus

CHAPTER

RMH Capital should begin with a small number of sectors and client archetypes where its knowledge, network and brand are credible.

O1

Build sector pods around client problems, not marketing labels.

O2

Prioritize repeatable decision journeys across growth, liquidity and strategic transition.

O3

Apply clear client acceptance rules before any commercial commitment.

Gaming and interactive media

Studios, publishers, platforms and tooling companies face volatile hits, portfolio concentration and complex IP economics.

BUILD

Offer portfolio strategy, publishing economics, M&A, financing and strategic-partnership advisory.

GUARDRAIL

Assess IP ownership, platform dependence, revenue recognition, community risk and key-person exposure.

BOARD MEASURE

Sector pipeline, proprietary buyer map, financed runway and closed mandates.

OPERATING VIEW | ILLUSTRATIVE

Coverage breadth should expand only when the firm can add differentiated insight, qualified talent and adequate controls.

Digital media and creator economy

Media businesses require capital strategies that recognize audience quality, platform dependency and monetization volatility.

● BUILD

Integrate cohort economics, rights, sponsorship, subscription and commerce analysis into transaction advice.

● GUARDRAIL

Validate traffic quality, content rights, advertiser concentration and consumer-protection exposure.

● BOARD MEASURE

Audience-quality diligence, repeat revenue, strategic bidders and capital efficiency.

OPERATING VIEW | ILLUSTRATIVE

Capital strategy

Rights & contracts

Monetization

Engagement

Audience

Coverage breadth should expand only when the firm can add differentiated insight, qualified talent and adequate controls.

AI and data platforms

AI companies create high-growth opportunities alongside model, data, compute, legal and commercialization risks.

BUILD

Develop diligence modules for training data, model dependency, unit economics, infrastructure commitments and defensibility.

GUARDRAIL

Escalate privacy, IP, export-control, safety and model-governance concerns to qualified specialists.

BOARD MEASURE

Diligence completion, compute-adjusted gross margin, customer concentration and recurring revenue quality.

OPERATING VIEW | ILLUSTRATIVE

Coverage breadth should expand only when the firm can add differentiated insight, qualified talent and adequate controls.

Software and developer tools

Developer platforms benefit from durable workflows but can suffer from open-source, cloud and customer-concentration risks.

- BUILD**
Advise on growth capital, strategic sales, carve-outs and partnerships using product-led-growth analytics.
- GUARDRAIL**
Review license obligations, security posture, dependency risk and contract assignability.
- BOARD MEASURE**
Net retention, gross margin, buyer coverage and diligence exceptions.

OPERATING VIEW | ILLUSTRATIVE

Retention

Usage

Margin

Enterprise mix

Coverage breadth should expand only when the firm can add differentiated insight, qualified talent and adequate controls.

Digital infrastructure

Cloud, data-center, connectivity and edge businesses combine technology growth with capital-intensive assets and contracts.

● BUILD

Partner with infrastructure specialists for debt, project finance and strategic capital where required.

● GUARDRAIL

Do not retain underwriting or lending exposure without separate capital, licensing and risk approvals.

● BOARD MEASURE

Contracted revenue, capital intensity, partner coverage and financing certainty.

OPERATING VIEW | ILLUSTRATIVE

Coverage breadth should expand only when the firm can add differentiated insight, qualified talent and adequate controls.

Founder-led growth companies

Founders often need a trusted advisor before a transaction is formally launched.

● BUILD

Create an annual strategic-finance agenda covering ownership, runway, hiring, acquisitions, succession and liquidity.

● GUARDRAIL

Document roles, authority, conflicts and fee arrangements when advising both company and shareholders.

● BOARD MEASURE

Retainer conversion, agenda completion, founder satisfaction and mandate continuity.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Coverage breadth should expand only when the firm can add differentiated insight, qualified talent and adequate controls.

Sponsor and investor clients

Financial sponsors and growth investors can be clients, counterparties, capital sources and conflict vectors.

BUILD

Establish sponsor coverage, portfolio-company programs and transparent role definitions for each engagement.

GUARDRAIL

Run conflicts before sharing opportunities; disclose financial interests, fees and relationship history.

BOARD MEASURE

Sponsor relationships, portfolio mandates, conflict resolution time and repeat activity.

OPERATING VIEW | ILLUSTRATIVE

Coverage breadth should expand only when the firm can add differentiated insight, qualified talent and adequate controls.

Client acceptance framework

A disciplined client-selection process protects the franchise from conduct, sanctions, fraud and execution risk.

● BUILD

Use risk-based onboarding across identity, ownership, source of funds, business model, reputation and engagement fit.

● GUARDRAIL

High-risk clients require enhanced due diligence and senior control approval; prohibited clients are declined.

● BOARD MEASURE

Onboarding cycle time, EDD cases, declines, exceptions and refresh completion.

OPERATING VIEW | ILLUSTRATIVE

Coverage breadth should expand only when the firm can add differentiated insight, qualified talent and adequate controls.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve the initial five-sector focus and target-client definition.
- O2** Require risk-based client acceptance before engagement letters are signed.
- O3** Expand coverage only through a documented sector-entry case.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Coverage breadth should expand only when the firm can add differentiated insight, qualified talent and adequate controls.

Business architecture

CHAPTER

The target model separates regulated activities, advisory services, technology and group ownership while presenting one coordinated client experience.

O1

Use legal entities that match permissions and liabilities.

O2

Centralize standards while keeping revenue teams accountable for execution.

O3

Design for modular expansion without creating hidden cross-subsidies.

Target legal-entity map

A holding-company structure can isolate broker-dealer obligations from nonregulated advisory and technology services.

● BUILD

Form RMH Capital Holdings, RMH Capital Markets LLC, RMH Corporate Finance LLC and RMH Intelligence LLC, subject to counsel.

● GUARDRAIL

Use written intercompany agreements, transfer-pricing support, data-access rules and separate books and records.

● BOARD MEASURE

Entity profitability, intercompany balances, capital adequacy and service-level compliance.

OPERATING VIEW | ILLUSTRATIVE

Organizational simplicity is a control: every activity must have one legal entity, one accountable executive and one supervisory path.

Operating divisions

Four coordinated divisions create a coherent proposition while preserving distinct product accountability.

- BUILD**
Assign division heads for Investment Banking, Markets, Corporate Finance and Intelligence with shared coverage rules.
- GUARDRAIL**
Each product has a product owner, supervisor, compliance owner and documented approval status.
- BOARD MEASURE**
Division revenue, contribution margin, control findings and cross-division client outcomes.

OPERATING VIEW | ILLUSTRATIVE

Organizational simplicity is a control: every activity must have one legal entity, one accountable executive and one supervisory path.

Front-to-back ownership

Client teams should own outcomes end to end, but control functions must remain independent and empowered.

● BUILD

Define a RACI from origination through onboarding, execution, billing, surveillance, archiving and post-mortem.

● GUARDRAIL

No revenue executive may approve their own conflict, exception, valuation or compliance determination.

● BOARD MEASURE

RACI exceptions, handoff defects, unresolved ownership and process cycle time.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Organizational simplicity is a control: every activity must have one legal entity, one accountable executive and one supervisory path.

Shared-services model

Finance, people, legal operations and selected technology can be shared with RMH Studios when controls and service levels are explicit.

● BUILD

Create service catalogs, data boundaries, cost allocation and escalation paths for every shared capability.

● GUARDRAIL

Regulated records, supervisory systems and confidential client data remain under RMH Capital control.

● BOARD MEASURE

Service availability, incidents, allocations, audit rights and remediation time.

OPERATING VIEW | ILLUSTRATIVE

External providers

Group services

Shared technology

Capital controls

Client applications

Organizational simplicity is a control: every activity must have one legal entity, one accountable executive and one supervisory path.

Build-partner boundary

The model should own differentiated advice and orchestration while renting commoditized financial infrastructure.

- BUILD**
Partner for clearing, custody, settlement, market data, KYC utilities, secure communications and specialist distribution.
- GUARDRAIL**
Critical vendors require diligence, resilience testing, data terms, regulatory access and exit plans.
- BOARD MEASURE**
Vendor concentration, SLA performance, recovery time and substitution readiness.

OPERATING VIEW | ILLUSTRATIVE

Organizational simplicity is a control: every activity must have one legal entity, one accountable executive and one supervisory path.

Management forums

Decision rights should be concentrated in a small set of forums with written charters and auditable minutes.

- BUILD**
Establish Executive, New Business, Product Approval, Risk, Valuation and Asset-Liability committees as needed by scope.
- GUARDRAIL**
Committee approval does not replace individual supervisory accountability.
- BOARD MEASURE**
Decision aging, attendance, conditions, overdue actions and challenge quality.

OPERATING VIEW | ILLUSTRATIVE

Organizational simplicity is a control: every activity must have one legal entity, one accountable executive and one supervisory path.

Information boundaries

The client experience can be integrated without allowing confidential information to flow freely across teams.

● BUILD

Implement deal teams, access groups, restricted lists, wall-crossing procedures and consent-based collaboration.

● GUARDRAIL

Default-deny access for MNPI, personal data, investor lists and competitive intelligence.

● BOARD MEASURE

Access reviews, wall crossings, restricted-list updates and anomalous activity.

OPERATING VIEW | ILLUSTRATIVE

Organizational simplicity is a control: every activity must have one legal entity, one accountable executive and one supervisory path.

Scalability principles

The architecture must scale through standardized workflows and data, not uncontrolled layers of management.

- BUILD**
Codify products, permissions, documents, approvals, fee mechanics and reporting as reusable components.
- GUARDRAIL**
Novel work enters an exception path; repeated exceptions trigger product redesign or rejection.
- BOARD MEASURE**
Automation rate, exception volume, revenue per FTE and time to launch approved products.

OPERATING VIEW | ILLUSTRATIVE

Organizational simplicity is a control: every activity must have one legal entity, one accountable executive and one supervisory path.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve the proposed legal-entity concept for counsel validation.
- O2** Mandate one accountable owner and supervisory path for every activity.
- O3** Require formal service agreements for all RMH group dependencies.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Organizational simplicity is a control: every activity must have one legal entity, one accountable executive and one supervisory path.

06

Investment Banking

CHAPTER

Investment Banking should be the flagship: senior-led strategic advice and capital formation for digital-economy clients, delivered with rigorous process discipline.

01

Lead with M&A; and capital advisory, where RMH can differentiate through judgment.

02

Build repeatable sector playbooks and transaction governance.

03

Add underwriting risk only after a separate capital and regulatory case.

M&A; advisory proposition

RMH can compete on preparation, sector insight, senior access and a technology-enabled process rather than global balance sheet.

● BUILD

Offer sell-side, buy-side, strategic alternatives, carve-out and minority-investment advice.

● GUARDRAIL

Require conflicts clearance, engagement governance, valuation support and documented communication protocols.

● BOARD MEASURE

Retainer coverage, close rate, fee realization, buyer breadth and client outcomes.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Bankers own trusted advice; the institution owns conflicts, supervision, valuation standards and execution quality.

Sell-side execution

A strong sell-side process converts a company story into credible diligence, competitive tension and decision control.

- **BUILD**

Standardize readiness, materials, buyer mapping, data-room sequencing, bids and negotiation workstreams.

- **GUARDRAIL**

Control leaks, buyer access, management burden, forecasts, bids and equal-information protocols.

- **BOARD MEASURE**

Time to market, qualified bids, valuation range, diligence exceptions and closing certainty.

OPERATING VIEW | ILLUSTRATIVE

Bankers own trusted advice; the institution owns conflicts, supervision, valuation standards and execution quality.

Buy-side advisory

Buyers need help translating strategy into targets, valuation discipline, diligence and integration logic.

BUILD

Offer target screening, approach strategy, valuation, diligence coordination and negotiation support.

GUARDRAIL

Separate buy-side advice from any conflicting sell-side or financing role unless fully disclosed and approved.

BOARD MEASURE

Targets screened, diligence issues identified, bid discipline and synergy realization plan.

OPERATING VIEW | ILLUSTRATIVE

Bankers own trusted advice; the institution owns conflicts, supervision, valuation standards and execution quality.

Equity capital advisory

Private companies need objective guidance across primary equity, strategic investment, convertibles and secondary liquidity.

● BUILD

Design capitalization alternatives, investor positioning, process strategy and placement execution where permitted.

● GUARDRAIL

Disclose placement fees, investor relationships, allocation practices and any principal interest.

● BOARD MEASURE

Investor engagement, terms, dilution, capital certainty and post-money governance.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Bankers own trusted advice; the institution owns conflicts, supervision, valuation standards and execution quality.

Debt capital advisory

Capital structure advice should identify debt capacity and financing paths without implying RMH will provide balance sheet.

- BUILD**
Model debt capacity, covenant headroom, refinancing, acquisition financing and lender selection with partner banks.
- GUARDRAIL**
Use qualified specialists; clearly distinguish advice, arranging and underwriting activities.
- BOARD MEASURE**
Interest coverage, covenant cushion, financing certainty and lender diversification.

OPERATING VIEW | ILLUSTRATIVE

Bankers own trusted advice; the institution owns conflicts, supervision, valuation standards and execution quality.

Strategic alternatives

Not every client should sell or raise capital; the highest-value advice may be to wait, partner, restructure or refocus.

BUILD

Use a board-ready alternatives framework covering stand-alone plan, financing, partnership, acquisition and sale.

GUARDRAIL

Base recommendations on documented assumptions and disclose material incentives created by success fees.

BOARD MEASURE

Alternative value ranges, confidence, trigger points and board alignment.

OPERATING VIEW | ILLUSTRATIVE

Bankers own trusted advice; the institution owns conflicts, supervision, valuation standards and execution quality.

Restructuring capability

Restructuring can be valuable but should launch only after the firm has senior expertise, creditor-side protocols and conflict capacity.

- **BUILD**

Begin with liquidity planning and out-of-court strategic finance; partner on formal restructurings.

- **GUARDRAIL**

Heightened review for insolvency, fiduciary duties, creditor conflicts, valuation and contingency fees.

- **BOARD MEASURE**

Runway, stakeholder map, scenario recovery and engagement risk rating.

OPERATING VIEW | ILLUSTRATIVE

Bankers own trusted advice; the institution owns conflicts, supervision, valuation standards and execution quality.

Banking operating model

A lean pod model can combine one senior relationship lead, execution talent, corporate finance and sector intelligence.

● BUILD

Create pods with explicit staffing ratios, review points, work-product standards and knowledge capture.

● GUARDRAIL

Supervisors approve client communications, materials, valuation methods and sensitive outreach.

● BOARD MEASURE

Senior leverage, hours per mandate, error rate, utilization and post-deal review completion.

OPERATING VIEW | ILLUSTRATIVE

Bankers own trusted advice; the institution owns conflicts, supervision, valuation standards and execution quality.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve M&A; and private capital advisory as the launch product set.
- O2** Defer underwriting and balance-sheet commitments beyond the initial perimeter.
- O3** Require transaction committees and written valuation standards before first mandate.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Bankers own trusted advice; the institution owns conflicts, supervision, valuation standards and execution quality.

07 Markets

CHAPTER

Markets should begin as intelligence, distribution and agency connectivity - not as a principal-risk trading business.

01

Create investor relevance before building execution complexity.

02

Use partners for custody, clearing and regulated infrastructure.

03

Separate research, banking and confidential information from day one.

Launch perimeter for Markets

The first markets capabilities should be research, investor mapping, corporate access and permitted private distribution.

- BUILD**
Build an investor-relations and distribution desk integrated with banking and sector intelligence.
- GUARDRAIL**
Do not execute securities transactions or solicit investors before required registrations and supervisory systems are effective.
- BOARD MEASURE**
Qualified investor relationships, approved contacts, meeting conversion and distribution fees.

OPERATING VIEW | ILLUSTRATIVE

The initial markets franchise earns through access, distribution and agency services while carrying minimal inventory, settlement and balance-sheet risk.

Research and insights

Independent, high-quality sector research can support relationships and origination without becoming promotional banking content.

- **BUILD**
Publish thematic research with documented methodology, review, disclosures and distribution controls.
- **GUARDRAIL**
Separate research conclusions from banking influence; manage analyst holdings and conflicts as required.
- **BOARD MEASURE**
Research readership, client engagement, methodology exceptions and compliance review time.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

The initial markets franchise earns through access, distribution and agency services while carrying minimal inventory, settlement and balance-sheet risk.

Investor coverage

A curated investor network is more valuable than a large unqualified contact database.

BUILD

Segment investors by mandate, check size, geography, strategy, sector, stage and engagement history.

GUARDRAIL

Maintain consent, communication preferences, suitability data and restrictions on opportunity sharing.

BOARD MEASURE

Active investors, response quality, conversion, concentration and data freshness.

OPERATING VIEW | ILLUSTRATIVE

The initial markets franchise earns through access, distribution and agency services while carrying minimal inventory, settlement and balance-sheet risk.

Corporate access

RMH can convene management teams, investors and sector experts around substantive themes.

- **BUILD**
Offer compliant non-deal roadshows, roundtables, conferences and expert sessions.
- **GUARDRAIL**
Apply fair access, MNPI protocols, expert-network controls and event disclosures.
- **BOARD MEASURE**
Qualified meetings, follow-up activity, satisfaction and compliance incidents.

OPERATING VIEW | ILLUSTRATIVE

The initial markets franchise earns through access, distribution and agency services while carrying minimal inventory, settlement and balance-sheet risk.

Private placements

Private placement execution can bridge banking advice and investor demand once permissions and supervision are in place.

● BUILD

Create standardized issuer diligence, investor qualification, materials, communication and allocation workflows.

● GUARDRAIL

Address broker-dealer status, Reg D or other exemptions, bad-actor checks, records and compensation.

● BOARD MEASURE

Qualified demand, coverage ratio, close rate, allocations and post-close issues.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

The initial markets franchise earns through access, distribution and agency services while carrying minimal inventory, settlement and balance-sheet risk.

Agency execution option

Agency execution may add client utility later but requires materially greater licensing, surveillance and operational capability.

- **BUILD**
Evaluate introducing-broker and fully disclosed clearing models before any build decision.
- **GUARDRAIL**
No proprietary positions, customer custody or self-clearing without a new board and regulatory approval.
- **BOARD MEASURE**
Expected flow, take rate, vendor cost, control cost and break-even volume.

OPERATING VIEW | ILLUSTRATIVE

Introducing model

- Low capital
- Higher capital
- Partner clearing
- Own settlement

Self-built model

- Faster launch
- Longer build
- Dependency risk
- Operational risk

The initial markets franchise earns through access, distribution and agency services while carrying minimal inventory, settlement and balance-sheet risk.

Market-risk boundary

At launch, market risk should arise only from immaterial operational exposures, not directional positions.

- **BUILD**
Set zero or de minimis limits for inventory, underwriting, derivatives and unsecured counterparty exposure.
- **GUARDRAIL**
Any exception triggers pre-trade risk approval, capital analysis, valuation and board notification thresholds.
- **BOARD MEASURE**
Gross and net exposure, limit usage, aged breaks, counterparty exposure and stress loss.

OPERATING VIEW | ILLUSTRATIVE

The initial markets franchise earns through access, distribution and agency services while carrying minimal inventory, settlement and balance-sheet risk.

Markets technology

The markets stack should prioritize compliant communication, investor data, content controls and partner connectivity.

● BUILD

Implement CRM entitlements, approved channels, archiving, research workflow, order handoff and surveillance interfaces.

● GUARDRAIL

Prohibit off-channel business communications and uncontrolled exports of investor or client data.

● BOARD MEASURE

Archived communications, entitlement reviews, surveillance alerts and partner reconciliations.

OPERATING VIEW | ILLUSTRATIVE

Execution partners

Control systems

Investor CRM

Research workflow

Client channels

The initial markets franchise earns through access, distribution and agency services while carrying minimal inventory, settlement and balance-sheet risk.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve a research-and-distribution launch model with no principal trading.
- O2** Require separate approval before agency execution or customer accounts.
- O3** Make information barriers and communications archiving launch-critical.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

The initial markets franchise earns through access, distribution and agency services while carrying minimal inventory, settlement and balance-sheet risk.

Corporate Finance

CHAPTER

Corporate Finance creates recurring, high-trust engagements before and after transactions by helping management teams make better capital, planning and treasury decisions.

O1

Build a subscription-like advisory layer that stabilizes revenue.

O2

Connect strategic plans to measurable financial operating systems.

O3

Keep accounting, audit, legal and investment advice boundaries explicit.

Strategic finance proposition

Many growth companies lack integrated planning, capital strategy and board-grade decision support.

● BUILD

Offer fractional strategic finance leadership, annual planning, scenario design and decision analytics.

● GUARDRAIL

Define scope clearly and avoid management responsibility, audit assurance or legal conclusions.

● BOARD MEASURE

Recurring revenue, renewal, forecast accuracy and decisions supported.

OPERATING VIEW | ILLUSTRATIVE

Revenue plan

Cash runway

Hiring plan

Capital plan

Corporate Finance should be a durable client operating partnership, not staff augmentation or an unbounded consulting practice.

FP&A; transformation

A reliable planning model creates the foundation for financing, M&A; and operating discipline.

BUILD

Standardize driver-based models, monthly forecasts, management reporting and variance narratives.

GUARDRAIL

Document model ownership, source systems, assumptions, controls and change history.

BOARD MEASURE

Forecast error, close-to-forecast cycle, model exceptions and management adoption.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Corporate Finance should be a durable client operating partnership, not staff augmentation or an unbounded consulting practice.

Treasury advisory

Cash, liquidity and counterparty management become strategic as companies scale and markets tighten.

● BUILD

Design liquidity policy, cash segmentation, banking structure, counterparty limits and investment-policy support.

● GUARDRAIL

Do not take deposits, custody assets or provide individualized securities advice outside permissions.

● BOARD MEASURE

Runway, liquidity buffer, counterparty concentration and policy compliance.

OPERATING VIEW | ILLUSTRATIVE

Policy & controls

Banking partners

Strategic liquidity

Reserve cash

Operating cash

Corporate Finance should be a durable client operating partnership, not staff augmentation or an unbounded consulting practice.

Valuation and decision support

Boards need transparent valuation ranges and scenario logic, not false precision.

● BUILD

Use triangulated methods, sensitivity analysis, market evidence and explicit confidence levels.

● GUARDRAIL

Apply valuation independence, method review and conflict disclosure for transaction-linked work.

● BOARD MEASURE

Range accuracy, method consistency, sensitivity coverage and review exceptions.

OPERATING VIEW | ILLUSTRATIVE

Corporate Finance should be a durable client operating partnership, not staff augmentation or an unbounded consulting practice.

Transaction readiness

Companies can reduce disruption and improve outcomes by preparing financial, commercial and governance evidence before a process.

- BUILD**
Offer readiness diagnostics, data-room preparation, KPI normalization, forecast support and diligence rehearsal.
- GUARDRAIL**
Do not manufacture metrics, backfill unsupported evidence or blur management and advisor representations.
- BOARD MEASURE**
Readiness score, open issues, diligence turnaround and process rework.

OPERATING VIEW | ILLUSTRATIVE

Measure	Limit	Owner	Status
Financial evidence	Green	CEO	ON TRACK
Commercial metrics	Amber	CRO	WATCH
Legal readiness	Red	COO	GATE
Data room	N/A	CFO	READY
Management narrative	Green	CCO	OPEN

Corporate Finance should be a durable client operating partnership, not staff augmentation or an unbounded consulting practice.

Capital structure planning

Capital choices should integrate cost, dilution, control, resilience and strategic flexibility.

● BUILD

Build a repeatable capital-structure framework across equity, debt, convertible and strategic alternatives.

● GUARDRAIL

Disclose assumptions and role-based incentives; refer regulated execution to approved entities or partners.

● BOARD MEASURE

Weighted cost, dilution, covenant capacity, runway and downside resilience.

OPERATING VIEW | ILLUSTRATIVE

Corporate Finance should be a durable client operating partnership, not staff augmentation or an unbounded consulting practice.

Board and investor reporting

High-quality reporting increases trust and shortens future transaction preparation.

● BUILD

Create board packs, KPI dictionaries, investor updates and decision logs tied to the operating model.

● GUARDRAIL

Apply confidentiality, disclosure, version control and selective-disclosure protocols.

● BOARD MEASURE

Board cycle time, KPI consistency, correction rate and stakeholder satisfaction.

OPERATING VIEW | ILLUSTRATIVE

Performance

Liquidity

Risk

Strategic priorities

Corporate Finance should be a durable client operating partnership, not staff augmentation or an unbounded consulting practice.

Corporate Finance delivery pods

A standardized pod can combine strategic finance, data, sector and transaction skills.

- BUILD**
Staff engagements with a finance lead, analyst, data specialist and executive sponsor under defined service tiers.
- GUARDRAIL**
Cap workload, review high-impact models and rotate key responsibilities to reduce dependence.
- BOARD MEASURE**
Gross margin, utilization, renewal, workload and quality-review findings.

OPERATING VIEW | ILLUSTRATIVE

Corporate Finance should be a durable client operating partnership, not staff augmentation or an unbounded consulting practice.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve Corporate Finance as the recurring-revenue anchor.
- O2** Define service tiers, scope boundaries and model-quality standards.
- O3** Use transaction readiness as the bridge into Banking mandates.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Corporate Finance should be a durable client operating partnership, not staff augmentation or an unbounded consulting practice.

09 RMH Intelligence

CHAPTER

RMH Intelligence is the digital operating layer that makes a boutique feel institutional: one data model, one client workspace and embedded controls across every engagement.

01

Use technology to reduce friction and strengthen evidence, not to bypass judgment.

02

Own the client and workflow layer; integrate commodity infrastructure.

03

Treat security, privacy and records as product requirements.

Platform vision

A unified platform can connect coverage, transactions, finance, research, approvals and client collaboration.

- BUILD**
Build modular applications on shared identity, permissions, data, workflow, document and analytics services.
- GUARDRAIL**
Regulated records and approvals require immutable history, retention and supervisory access.
- BOARD MEASURE**
User adoption, workflow coverage, data completeness and evidence retrieval time.

OPERATING VIEW | ILLUSTRATIVE

The platform should encode how RMH Capital works, what it is allowed to do and how every important decision is evidenced.

Client workspace

Clients should see milestones, requests, documents, decisions and analytics in one secure environment.

- BUILD**
Create engagement rooms with role-based access, task orchestration, Q&A, approvals and audit trails.
- GUARDRAIL**
Use least privilege, expiration, watermarking, download controls and data-residency review.
- BOARD MEASURE**
Portal adoption, request cycle time, access exceptions and client effort score.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

The platform should encode how RMH Capital works, what it is allowed to do and how every important decision is evidenced.

Relationship intelligence

Institutional memory is a competitive asset when it is structured, permissioned and accurate.

- BUILD**
Unify contacts, organizations, mandates, interactions, preferences, conflicts and relationship economics.
- GUARDRAIL**
Do not infer sensitive attributes or use client data beyond disclosed purposes and permissions.
- BOARD MEASURE**
Data quality, duplicate rate, coverage completeness and relationship-owner adoption.

OPERATING VIEW | ILLUSTRATIVE

The platform should encode how RMH Capital works, what it is allowed to do and how every important decision is evidenced.

Deal workflow engine

Repeatable transaction execution requires explicit gates, owners, documents and evidence.

BUILD

Encode onboarding, conflicts, engagement, diligence, outreach, bids, approvals, billing and close workflows.

GUARDRAIL

Block progression when required approvals, records or client permissions are missing.

BOARD MEASURE

Cycle time, skipped gates, rework, aged tasks and audit evidence completeness.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

The platform should encode how RMH Capital works, what it is allowed to do and how every important decision is evidenced.

Analytics and models

Reusable analytical components can improve speed and consistency across valuations, capital structures and forecasts.

● BUILD

Create governed model libraries with data lineage, versioning, review thresholds and scenario APIs.

● GUARDRAIL

Material models require independent validation, change control and clear human accountability.

● BOARD MEASURE

Model inventory, validation status, override rate and forecast or valuation variance.

OPERATING VIEW | ILLUSTRATIVE

Valuation models

Forecast models

Risk models

Client analytics

The platform should encode how RMH Capital works, what it is allowed to do and how every important decision is evidenced.

AI copilot boundary

AI can accelerate research, drafting, extraction and quality checks but should not make unsupervised client or compliance decisions.

- **BUILD**

Deploy approved use cases with retrieval controls, citations, evaluation, logging and human sign-off.

- **GUARDRAIL**

Prohibit training on confidential data without approval and prohibit autonomous advice, trading or client communication.

- **BOARD MEASURE**

Approved use cases, measured accuracy, human overrides, incidents and time saved.

OPERATING VIEW | ILLUSTRATIVE

The platform should encode how RMH Capital works, what it is allowed to do and how every important decision is evidenced.

Data architecture

A canonical data model reduces reconciliation, manual handoffs and inconsistent reporting.

- BUILD**
Define master entities, product taxonomy, permissions, lineage, quality rules and retention schedules.
- GUARDRAIL**
Separate production, analytics and experimentation; tokenize or minimize sensitive data where practical.
- BOARD MEASURE**
Critical data elements, quality score, lineage coverage and unresolved breaks.

Technology delivery model

A small product-engineering team can build differentiated layers while vendors provide secure foundations.

BUILD

Use product squads aligned to client experience, banking workflow and control infrastructure.

GUARDRAIL

Security architecture, change management, testing and resilience must scale before feature velocity.

BOARD MEASURE

Release frequency, change failure, vulnerability age, availability and product adoption.

OPERATING VIEW | ILLUSTRATIVE

The platform should encode how RMH Capital works, what it is allowed to do and how every important decision is evidenced.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve RMH Intelligence as a core capability, not a side project.
- O2** Prioritize identity, permissions, records and workflow before advanced AI.
- O3** Require model governance and human accountability for every AI use case.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

The platform should encode how RMH Capital works, what it is allowed to do and how every important decision is evidenced.

Client experience

CHAPTER

The winning experience is high-touch and high-clarity: senior attention, fast decisions, transparent progress and secure digital collaboration.

01

Design around client decisions rather than internal departments.

02

Make confidentiality and control visible without creating bureaucracy.

03

Measure trust, effort and outcomes across the full relationship.

Relationship entry

The first interaction should establish relevance, scope, confidentiality and the next decision without overselling.

● BUILD

Use structured discovery, sector insight, qualification and a clear statement of capabilities and limitations.

● GUARDRAIL

Do not provide regulated recommendations, solicit securities or receive confidential information before the appropriate process.

● BOARD MEASURE

Qualified-conversation rate, time to next step and expectation accuracy.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Every client journey should have a named owner, a defined decision, a visible next step and a complete institutional record.

Onboarding experience

Fast onboarding is valuable only when identity, conflicts and engagement terms are complete.

● BUILD

Use a single digital request list, progressive data collection, status transparency and issue escalation.

● GUARDRAIL

No work begins until required KYC, conflicts, approvals and engagement documentation are effective.

● BOARD MEASURE

Median onboarding time, client touches, exception rate and abandonment.

OPERATING VIEW | ILLUSTRATIVE

Every client journey should have a named owner, a defined decision, a visible next step and a complete institutional record.

One-team coverage

Clients should not have to navigate RMH organization charts to solve a problem.

- **BUILD**
Assign one relationship lead and one execution lead, supported by product and control specialists.
- **GUARDRAIL**
Role clarity and independent challenge remain visible even when the client experience is unified.
- **BOARD MEASURE**
Handoffs, duplicate requests, owner clarity and escalation response.

OPERATING VIEW | ILLUSTRATIVE

Every client journey should have a named owner, a defined decision, a visible next step and a complete institutional record.

Decision-quality materials

Board and management materials should be concise, evidence-based and explicit about uncertainty.

- BUILD**
Standardize decision memos, alternatives, assumptions, sensitivities, risks and recommended actions.
- GUARDRAIL**
Separate fact, estimate, opinion and client-provided information; preserve source evidence.
- BOARD MEASURE**
Revision cycles, factual corrections, decision time and client usefulness.

OPERATING VIEW | ILLUSTRATIVE

Weak materials

- Data dump
- Decision narrative
- Hidden assumptions
- Explicit assumptions

RMH standard

- Single outcome
- Scenarios
- Generic risks
- Actionable risks

Every client journey should have a named owner, a defined decision, a visible next step and a complete institutional record.

Secure collaboration

The digital experience should reduce email sprawl while increasing access control and traceability.

- **BUILD**
Move sensitive files, requests, approvals and Q&A; into the client workspace with approved communications.
- **GUARDRAIL**
Block unapproved channels, enforce retention and monitor abnormal access or sharing.
- **BOARD MEASURE**
Workspace usage, off-channel exceptions, access incidents and response time.

OPERATING VIEW | ILLUSTRATIVE

Every client journey should have a named owner, a defined decision, a visible next step and a complete institutional record.

Service recovery

Errors and delays are inevitable; trust depends on rapid ownership, transparency and remediation.

- BUILD**
Create a client-impact protocol covering notification, containment, correction, root cause and follow-up.
- GUARDRAIL**
Legal, compliance, privacy and operational incidents follow mandatory escalation and reporting paths.
- BOARD MEASURE**
Time to acknowledge, time to contain, repeat issues and client recovery score.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Every client journey should have a named owner, a defined decision, a visible next step and a complete institutional record.

Relationship cadence

A consistent cadence converts episodic transactions into long-term advisory relationships.

- BUILD**
Run quarterly strategic reviews, annual capital plans and event-driven decision sessions.
- GUARDRAIL**
Cadence must remain useful and consent-based, not a pretext for product pushing.
- BOARD MEASURE**
Meeting usefulness, agenda completion, follow-through and cross-cycle retention.

OPERATING VIEW | ILLUSTRATIVE

Every client journey should have a named owner, a defined decision, a visible next step and a complete institutional record.

Experience measurement

Client satisfaction alone is insufficient; RMH should measure effort, trust, outcomes and conduct.

- **BUILD**
Build a scorecard combining qualitative feedback, service metrics, economics and control indicators.
- **GUARDRAIL**
Never tie individual compensation solely to promoter scores or client pressure for exceptions.
- **BOARD MEASURE**
NPS, client effort, repeat rate, complaints, outcome achievement and control quality.

OPERATING VIEW | ILLUSTRATIVE

Measure	Limit	Owner	Status
Trust	Green	CEO	ON TRACK
Effort	Amber	CRO	WATCH
Outcomes	Red	COO	GATE
Retention	N/A	CFO	READY
Conduct	Green	CCO	OPEN

Every client journey should have a named owner, a defined decision, a visible next step and a complete institutional record.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve the one-team, one-workspace client-experience standard.
- O2** Make onboarding, progress and decision quality measurable.
- O3** Require visible service-recovery and complaint processes at launch.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Every client journey should have a named owner, a defined decision, a visible next step and a complete institutional record.

II

Organization and talent

CHAPTER

A credible launch depends more on a small number of experienced leaders and supervisors than on rapid headcount growth.

O1

Hire control leadership alongside revenue leadership.

O2

Use clear accountability, balanced incentives and institutional succession.

O3

Scale teams only against validated demand and supervisor capacity.

Leadership model

The founding CEO must combine client credibility, operating discipline, regulatory judgment and talent-building ability.

- BUILD**
Recruit a CEO supported by heads of Banking, Markets, Corporate Finance, Intelligence, Risk, Compliance, Finance and Operations.
- GUARDRAIL**
Key controlled-function appointments require documented fitness, experience, independence and regulator-ready records.
- BOARD MEASURE**
Leadership hires, role readiness, succession depth and board confidence.

OPERATING VIEW | ILLUSTRATIVE

Talent density, judgment and conduct are the operating system of an advisory franchise; organization design must reinforce all three.

Launch organization

A 24-person launch team can cover core products if mandates are tightly scoped and external specialists are used selectively.

- BUILD**
Staff 10 revenue professionals, 6 control and operations roles, 5 technology/data roles and 3 executive/support roles.
- GUARDRAIL**
Do not exceed supervisor span or allow junior execution without qualified review.
- BOARD MEASURE**
Illustrative 24 launch FTE, senior-to-junior ratio, utilization and open roles.

OPERATING VIEW | ILLUSTRATIVE

Talent density, judgment and conduct are the operating system of an advisory franchise; organization design must reinforce all three.

Phase-two organization

Headcount should expand toward approximately 48 only after revenue, pipeline and control gates are met.

- BUILD**
Add sector pods, distribution, corporate-finance delivery, surveillance and engineering in measured cohorts.
- GUARDRAIL**
Hiring gates include recurring revenue, qualified backlog, control capacity and 18-month liquidity.
- BOARD MEASURE**
Revenue per FTE, backlog per hire, manager span and fixed-cost coverage.

OPERATING VIEW | ILLUSTRATIVE

Talent density, judgment and conduct are the operating system of an advisory franchise; organization design must reinforce all three.

Three lines of accountability

Business ownership, independent risk and compliance, and internal assurance must be distinct even in a small firm.

● BUILD

Make first-line supervisors accountable; establish independent second-line challenge; outsource or co-source third-line audit initially.

● GUARDRAIL

Second-line leaders report independently to the Board Risk & Conduct Committee on material matters.

● BOARD MEASURE

Issues by line, overdue remediation, challenge outcomes and audit coverage.

OPERATING VIEW | ILLUSTRATIVE

Board oversight

Internal audit / assurance

Independent risk & compliance

Business ownership

Talent density, judgment and conduct are the operating system of an advisory franchise; organization design must reinforce all three.

Role architecture

Clear job families and decision rights reduce title inflation, compensation distortion and control ambiguity.

- BUILD**
Define levels, competencies, supervisory expectations, promotion evidence and role-specific licensing requirements.
- GUARDRAIL**
No individual performs a controlled or supervisory function without qualification and documented authority.
- BOARD MEASURE**
Role clarity, competency gaps, license status and promotion quality.

OPERATING VIEW | ILLUSTRATIVE

Talent density, judgment and conduct are the operating system of an advisory franchise; organization design must reinforce all three.

Compensation philosophy

Pay should reward durable client outcomes, teamwork, risk-adjusted performance and conduct - not gross revenue alone.

- BUILD**
Use salary, annual incentive, deferred awards and malus or clawback for senior and risk-taking roles.
- GUARDRAIL**
Control functions have independent compensation governance; material conduct failures reduce awards.
- BOARD MEASURE**
Deferred share, risk adjustments, pay equity, regrettable attrition and revenue quality.

OPERATING VIEW | ILLUSTRATIVE

Volume-led pay	RMH pay model
- Gross revenue - Risk-adjusted value - Individual credit - Team contribution	- Immediate cash - Deferral - Weak conduct link - Explicit consequences

Talent density, judgment and conduct are the operating system of an advisory franchise; organization design must reinforce all three.

Culture and conduct

A high-performance culture must normalize challenge, documentation, escalation and learning from near misses.

BUILD

Codify principles, manager routines, speak-up channels, conduct scenarios and consequences.

GUARDRAIL

Retaliation is prohibited; compliance escalation and client protection override commercial hierarchy.

BOARD MEASURE

Speak-up confidence, substantiated issues, training application and repeat incidents.

OPERATING VIEW | ILLUSTRATIVE

Talent density, judgment and conduct are the operating system of an advisory franchise; organization design must reinforce all three.

Succession and key-person risk

Founder dependence and rainmaker concentration can destabilize a boutique.

- **BUILD**

Use shared coverage, institutional CRM, documented playbooks, deferred compensation and succession plans.

- **GUARDRAIL**

No client, approval or critical vendor relationship should depend on one individual without backup.

- **BOARD MEASURE**

Top-originator concentration, backup coverage, succession readiness and relationship portability.

OPERATING VIEW | ILLUSTRATIVE

Talent density, judgment and conduct are the operating system of an advisory franchise; organization design must reinforce all three.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Authorize simultaneous recruitment of revenue and control leaders.
- O2** Approve the 24-FTE launch cap and evidence-based hiring gates.
- O3** Adopt risk-adjusted compensation and succession principles before offers are issued.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Talent density, judgment and conduct are the operating system of an advisory franchise; organization design must reinforce all three.

I2

Governance and controls

CHAPTER

Governance must be designed before revenue begins: board oversight, delegated authorities, product approval, conflicts and evidence are foundational capabilities.

O1

Create direct board visibility into risk, conduct and regulatory readiness.

O2

Use a small number of empowered committees with clear decision rights.

O3

Make every exception time-bound, owned and visible.

Board oversight model

The RMH Studios board should retain strategic and capital oversight while delegating day-to-day management to RMH Capital governance.

- **BUILD**
Create a subsidiary board or designated oversight structure plus a Board Risk & Conduct Committee.
- **GUARDRAIL**
Reserve regulated launch, risk appetite, capital changes, acquisitions and principal risk for board approval.
- **BOARD MEASURE**
Board attendance, reserved-matter compliance, information quality and overdue actions.

OPERATING VIEW | ILLUSTRATIVE

Good governance is not a meeting calendar; it is an explicit system for who may decide, who must challenge and what evidence must exist.

Delegated authority

Decision speed improves when financial, commercial, hiring and risk authorities are precise.

- **BUILD**
Publish an authority matrix by role, entity, product, amount, client risk and exception type.
- **GUARDRAIL**
No splitting transactions, retrospective approvals or self-approval of conflicts and exceptions.
- **BOARD MEASURE**
Authority breaches, retrospective approvals, escalation time and policy clarity.

OPERATING VIEW | ILLUSTRATIVE

Good governance is not a meeting calendar; it is an explicit system for who may decide, who must challenge and what evidence must exist.

New business approval

Every new client and mandate should pass through a risk-proportionate acceptance process.

- **BUILD**
Combine client risk, conflicts, product fit, capacity, economics and reputational review in one workflow.
- **GUARDRAIL**
High-risk or novel business requires Compliance, Risk and senior management approval.
- **BOARD MEASURE**
Approval cycle, conditions, declines, expirations and exception rate.

OPERATING VIEW | ILLUSTRATIVE

Good governance is not a meeting calendar; it is an explicit system for who may decide, who must challenge and what evidence must exist.

New product approval

A product is not merely a marketing label; it includes legal basis, target clients, workflow, controls, accounting and wind-down.

● **BUILD**

Require a product memorandum, permissions analysis, risk assessment, technology readiness and pilot plan.

● **GUARDRAIL**

No client use until all conditions are closed and supervisors are trained.

● **BOARD MEASURE**

Products approved, conditions open, pilot outcomes and post-launch reviews.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Good governance is not a meeting calendar; it is an explicit system for who may decide, who must challenge and what evidence must exist.

Conflicts management

Conflicts are inherent to investment banking and must be identified, assessed, disclosed, mitigated or declined.

● BUILD

Maintain a conflicts inventory, deal log, relationship map, restricted list and escalation playbook.

● GUARDRAIL

Commercial leaders may provide facts but cannot unilaterally clear their own conflicts.

● BOARD MEASURE

Conflicts identified, resolution type, aging, declines and disclosure quality.

OPERATING VIEW | ILLUSTRATIVE

Good governance is not a meeting calendar; it is an explicit system for who may decide, who must challenge and what evidence must exist.

Policy architecture

Policies should be concise, linked to procedures and controls, and owned by accountable executives.

- BUILD**
Create a policy hierarchy covering governance, conduct, clients, products, markets, information, operations and resilience.
- GUARDRAIL**
Outdated or unenforced policies create false assurance; every policy needs testing and annual certification.
- BOARD MEASURE**
Policy currency, attestations, exceptions, control mapping and test results.

OPERATING VIEW | ILLUSTRATIVE

Good governance is not a meeting calendar; it is an explicit system for who may decide, who must challenge and what evidence must exist.

Management information

Boards need a balanced dashboard of revenue, capital, clients, conduct, operations, technology and people.

● BUILD

Build one controlled data pack with definitions, thresholds, trends, narrative and actions.

● GUARDRAIL

Metrics must disclose data limitations and avoid suppressing adverse trends through aggregation.

● BOARD MEASURE

Data timeliness, threshold breaches, action closure and board usefulness.

OPERATING VIEW | ILLUSTRATIVE

Financial

Client

Risk

People

Good governance is not a meeting calendar; it is an explicit system for who may decide, who must challenge and what evidence must exist.

Issue management

Problems should move through one system from identification to root cause, remediation, validation and closure.

- **BUILD**
Classify severity, assign accountable owners, set deadlines and require independent validation for material issues.
- **GUARDRAIL**
Extensions require documented rationale and escalation; repeated symptoms trigger broader review.
- **BOARD MEASURE**
Open issues, overdue actions, recurrence, root-cause quality and validation outcomes.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Good governance is not a meeting calendar; it is an explicit system for who may decide, who must challenge and what evidence must exist.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Establish the Board Risk & Conduct Committee before launch.
- O2** Approve reserved matters, delegated authorities and committee charters.
- O3** Require product, client, conflict and issue workflows as launch gates.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Good governance is not a meeting calendar; it is an explicit system for who may decide, who must challenge and what evidence must exist.

I3 Regulatory strategy

CHAPTER

The regulatory plan should pursue the narrowest permissions consistent with the launch proposition, supported by experienced counsel, qualified principals and complete supervisory infrastructure.

O1

Treat legal perimeter analysis as a product-design input.

O2

Sequence applications, hiring and technology around regulator expectations.

O3

Use partners only where responsibilities are contractually and operationally clear.

Regulatory perimeter

M&A; advice, securities placement, investor solicitation, research and execution can trigger different federal and state requirements.

- BUILD**
Create an activity inventory mapped to legal entity, jurisdiction, registration, license, supervisor and control.
- GUARDRAIL**
Counsel must review all compensation models, communications and cross-border activity before launch.
- BOARD MEASURE**
Activities mapped, open legal questions, permission gaps and prohibited activity attempts.

OPERATING VIEW | ILLUSTRATIVE

RMH Capital must never conduct activity first and determine its regulatory status later.

Broker-dealer pathway

The proposed securities business likely requires a registered broker-dealer and FINRA membership for covered activities.

- BUILD**
Prepare entity formation, Form BD, FINRA New Member Application, business plan, financial projections, WSPs and qualified personnel.
- GUARDRAIL**
Final requirements and timing depend on scope and regulator review; no approval should be assumed.
- BOARD MEASURE**
Application completeness, regulator questions, conditions, exam readiness and target decision date.

OPERATING VIEW | ILLUSTRATIVE

RMH Capital must never conduct activity first and determine its regulatory status later.

Membership scope

A narrow initial application can reduce complexity if it accurately reflects the intended business and foreseeable growth.

- BUILD**
Seek permissions for approved advisory and private-placement activities; defer customer accounts and principal trading.
- GUARDRAIL**
Material business changes may require regulator notice or approval before implementation.
- BOARD MEASURE**
Approved activities, restrictions, continuing membership changes and scope exceptions.

Supervisory system

Written supervisory procedures must reflect actual workflows, personnel, systems and evidence.

- BUILD**
Map supervisory controls across onboarding, communications, transactions, conflicts, AML, books and records and complaints.
- GUARDRAIL**
Templates are insufficient unless tailored, trained, tested and consistently evidenced.
- BOARD MEASURE**
Supervisory reviews, exceptions, missed evidence and annual certification.

OPERATING VIEW | ILLUSTRATIVE

RMH Capital must never conduct activity first and determine its regulatory status later.

AML and customer due diligence

A risk-based AML program is required for covered broker-dealer activity and must align with products and customers.

- **BUILD**
Appoint an AML officer, assess risk, implement CIP/CDD, monitoring, escalation, testing and training.
- **GUARDRAIL**
Beneficial ownership, sanctions and suspicious-activity obligations must be validated against current rules and implementation dates.
- **BOARD MEASURE**
KYC completion, alerts, escalations, testing findings and training.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

RMH Capital must never conduct activity first and determine its regulatory status later.

Privacy and safeguarding

Financial institutions face expanding obligations for customer information safeguards, incident response and notification.

● BUILD

Implement privacy notices, data inventories, access controls, incident response, vendor oversight and records.

● GUARDRAIL

Applicability and deadlines require counsel review; systems must support required evidence and notifications.

● BOARD MEASURE

Access reviews, incidents, notification timeliness, vendor compliance and control tests.

OPERATING VIEW | ILLUSTRATIVE

RMH Capital must never conduct activity first and determine its regulatory status later.

Books, records and communications

Regulated businesses must preserve required records and supervise business communications across approved channels.

- BUILD**
Select compliant archiving, retention, search, legal hold, review and export capabilities before launch.
- GUARDRAIL**
Prohibit off-channel communications and personal-device business unless approved and captured.
- BOARD MEASURE**
Capture coverage, review completion, retrieval time and off-channel exceptions.

OPERATING VIEW | ILLUSTRATIVE

RMH Capital must never conduct activity first and determine its regulatory status later.

Regulatory engagement model

Transparent, well-prepared engagement with regulators reduces surprises and demonstrates management credibility.

● BUILD

Maintain a regulatory calendar, accountable owners, examination room, evidence catalog and response governance.

● GUARDRAIL

All submissions must be accurate, complete, consistent and approved; material issues are escalated promptly.

● BOARD MEASURE

Submission timeliness, exam requests, response quality, findings and remediation.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

RMH Capital must never conduct activity first and determine its regulatory status later.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Authorize specialist broker-dealer and regulatory counsel.
- O2** Approve a narrow initial membership scope and prohibit activity outside it.
- O3** Make WSPs, licensing, AML, records and communications systems pre-launch conditions.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

RMH Capital must never conduct activity first and determine its regulatory status later.

I4

Risk management

CHAPTER

RMH Capital should operate within a written risk appetite that favors advisory and agency revenues, limits balance-sheet exposure and protects client trust.

O1

Define measurable limits before accepting risk.

O2

Integrate risk decisions into client and product workflows.

O3

Stress liquidity, concentration and operational resilience from launch.

Risk taxonomy

A common taxonomy allows the board and management to aggregate risks across products, entities and clients.

- **BUILD**

Cover strategic, credit, market, liquidity, operational, compliance, conduct, model, cyber, privacy and reputational risk.

- **GUARDRAIL**

Every material risk has an owner, appetite statement, controls, metrics, scenarios and escalation path.

- **BOARD MEASURE**

Risk inventory completeness, owner attestations and unmitigated exposures.

OPERATING VIEW | ILLUSTRATIVE

Risk management should make good business repeatable and bad business difficult - without becoming detached from front-line decisions.

Risk appetite

The launch appetite should be high for advisory judgment and low for principal, custody, settlement and unsecured exposures.

- BUILD**
Set qualitative statements and quantitative limits by risk type, product, client and legal entity.
- GUARDRAIL**
Breaches trigger immediate containment, escalation, root cause and board reporting thresholds.
- BOARD MEASURE**
Limit usage, breaches, near breaches, exceptions and remediation time.

OPERATING VIEW | ILLUSTRATIVE

Measure	Limit	Owner	Status
Principal exposure	Green	CEO	ON TRACK
Liquidity buffer	Amber	CRO	WATCH
Client concentration	Red	COO	GATE
Operational incidents	N/A	CFO	READY
Conduct	Green	CCO	OPEN

Risk management should make good business repeatable and bad business difficult - without becoming detached from front-line decisions.

Client and transaction risk

Risk varies materially by client ownership, business model, jurisdiction, urgency and transaction structure.

- **BUILD**
Use a transaction risk rating that drives diligence, approvals, staffing and monitoring.
- **GUARDRAIL**
High-risk ratings cannot be overridden solely for revenue; prohibited risk is declined.
- **BOARD MEASURE**
Risk mix, EDD rate, approval conditions, post-close issues and losses.

OPERATING VIEW | ILLUSTRATIVE

Risk management should make good business repeatable and bad business difficult - without becoming detached from front-line decisions.

Concentration risk

A boutique can become dependent on a few clients, sectors, bankers, counterparties or vendors.

- **BUILD**
Set exposure and revenue limits with early-warning thresholds and diversification plans.
- **GUARDRAIL**
Concentration waivers require risk analysis, time limits and named mitigation.
- **BOARD MEASURE**
Top-5 client revenue, sector mix, producer concentration and vendor dependency.

OPERATING VIEW | ILLUSTRATIVE

Illustrative Index
Risk management should make good business repeatable and bad business difficult - without becoming detached from front-line decisions.

Liquidity risk

Fee timing is uncertain while payroll and regulatory costs are fixed.

- BUILD**
Maintain a minimum liquidity buffer, 13-week forecast, stress scenarios and funding contingency plan.
- GUARDRAIL**
Restricted regulatory capital and client-related funds cannot be used as operating liquidity.
- BOARD MEASURE**
Months of runway, stressed cash low point, receivables aging and covenant headroom.

OPERATING VIEW | ILLUSTRATIVE

Risk management should make good business repeatable and bad business difficult - without becoming detached from front-line decisions.

Operational risk

Execution errors, record failures, cyber events and vendor outages can quickly become client and regulatory issues.

● **BUILD**

Use control self-assessments, incident management, key risk indicators, reconciliations and resilience tests.

● **GUARDRAIL**

Material incidents require independent classification, notification assessment and verified remediation.

● **BOARD MEASURE**

Incidents, near misses, losses, control tests and recovery performance.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Risk management should make good business repeatable and bad business difficult - without becoming detached from front-line decisions.

Model risk

Valuation, forecast, risk and AI models can create false confidence when assumptions, data or limitations are hidden.

- **BUILD**
Maintain model inventory, tiering, validation, owner accountability, change control and user guidance.
- **GUARDRAIL**
Material model overrides are documented and independently reviewed.
- **BOARD MEASURE**
Validation coverage, findings, overrides, drift and data-quality exceptions.

OPERATING VIEW | ILLUSTRATIVE

Risk management should make good business repeatable and bad business difficult - without becoming detached from front-line decisions.

Reputational and conduct risk

A single conflicted recommendation, misleading claim or mishandled client can damage the whole RMH brand.

- BUILD**
Integrate conduct scenarios, complaint analysis, disclosure review and senior escalation into daily operations.
- GUARDRAIL**
Legal permissibility is not sufficient when an activity is unfair, misleading or inconsistent with stated values.
- BOARD MEASURE**
Complaints, conduct events, disclosure errors, media issues and client remediation.

OPERATING VIEW | ILLUSTRATIVE

Risk management should make good business repeatable and bad business difficult - without becoming detached from front-line decisions.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1 Approve the advisory-led risk appetite and zero-principal launch boundary.
- O2 Set liquidity, concentration and conduct thresholds before first revenue.
- O3 Require risk ratings and independent escalation within core workflows.

PROCEED ONLY WHEN

- Y The accountable executive and independent control owner are named.
- Y The activity, legal entity, permissions, workflow and evidence are documented.
- Y The economics remain attractive under a downside case and liquidity remains above threshold.

Risk management should make good business repeatable and bad business difficult - without becoming detached from front-line decisions.

Operations and technology

CHAPTER

Operations should be designed as a controlled digital workflow with resilient partners, clean data and visible service ownership.

O1

Automate evidence before automating judgment.

O2

Keep customer asset and settlement complexity outside the launch perimeter.

O3

Engineer resilience, cybersecurity and vendor exits from the beginning.

Target operating model

A single front-to-back model should connect client origination, approval, execution, billing, records and review.

● BUILD

Document process maps, systems, roles, controls, data and service levels for every launch product.

● GUARDRAIL

Manual workarounds are logged, time-bound and reconciled; critical spreadsheets are governed.

● BOARD MEASURE

Straight-through rate, handoff defects, manual controls and cycle time.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Operational scale comes from standardized products, controlled data and reliable handoffs - not from heroics.

Core systems landscape

The launch stack requires CRM, onboarding, conflicts, workflow, document management, communications, finance and reporting.

- BUILD**
Select modular systems with APIs, strong identity controls, audit logs, exports and vendor support.
- GUARDRAIL**
Avoid overlapping systems of record and ungoverned local databases.
- BOARD MEASURE**
System coverage, integrations, duplicate data, availability and user adoption.

Cybersecurity baseline

Financial-services credibility requires mature identity, endpoint, cloud, data and incident controls from day one.

- BUILD**
Implement MFA, device management, least privilege, encryption, monitoring, vulnerability management and response exercises.
- GUARDRAIL**
Privileged access is time-bound; critical findings are remediated to defined service levels.
- BOARD MEASURE**
MFA coverage, critical vulnerabilities, phishing resilience, detection and recovery time.

Business continuity

The firm must maintain critical client, supervisory and records functions through outages and disruptions.

- BUILD**
Define impact tolerances, alternate procedures, recovery objectives, communications and annual testing.
- GUARDRAIL**
Plans must include vendor failure, cyber events, office loss and key-person unavailability.
- BOARD MEASURE**
Recovery-time performance, test findings, vendor participation and unresolved gaps.

OPERATING VIEW | ILLUSTRATIVE

Operational scale comes from standardized products, controlled data and reliable handoffs - not from heroics.

Third-party risk

Partners can reduce build cost but transfer neither accountability nor reputational consequences.

- **BUILD**

Tier vendors, perform diligence, negotiate controls, monitor service, test continuity and maintain exit plans.

- **GUARDRAIL**

Critical contracts require audit rights, incident notification, data return or deletion and regulatory cooperation.

- **BOARD MEASURE**

Critical vendors, concentration, SLA breaches, open findings and exit readiness.

OPERATING VIEW | ILLUSTRATIVE

Operational scale comes from standardized products, controlled data and reliable handoffs - not from heroics.

Finance operations

Accurate billing, revenue recognition, expenses, capital and entity reporting are essential to trust and regulatory readiness.

- BUILD**
Implement engagement-to-cash workflow, fee approvals, receivables, close controls and management reporting.
- GUARDRAIL**
Separate fee calculation, approval, invoicing and cash application; reconcile intercompany activity.
- BOARD MEASURE**
Days sales outstanding, billing errors, close time, reconciliations and cash forecast accuracy.

OPERATING VIEW | ILLUSTRATIVE

Operational scale comes from standardized products, controlled data and reliable handoffs - not from heroics.

Records and evidence

The firm should be able to reconstruct every client, transaction, supervisory and risk decision.

● BUILD

Create an evidence catalog linked to workflow events, records schedules, legal holds and regulator export.

● GUARDRAIL

Do not rely on personal inboxes, local drives or undocumented verbal approvals.

● BOARD MEASURE

Evidence completeness, retrieval time, retention exceptions and legal-hold compliance.

OPERATING VIEW | ILLUSTRATIVE

Immutable archive

Document

Communication

Approval

Business event

Operational scale comes from standardized products, controlled data and reliable handoffs - not from heroics.

Operating resilience roadmap

Operational maturity should expand in step with product complexity and client impact.

- BUILD**
Move from controlled launch to integrated monitoring, automated reconciliation and tested multi-provider resilience.
- GUARDRAIL**
No product scales beyond the demonstrated capacity of operations and controls.
- BOARD MEASURE**
Capacity utilization, resilience tests, incident trend and scale-gate approvals.

OPERATING VIEW | ILLUSTRATIVE

Operational scale comes from standardized products, controlled data and reliable handoffs - not from heroics.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve the launch systems and partner-selection program.
- O2** Require cybersecurity, continuity and records testing before client activity.
- O3** Tie product scale to demonstrated operational capacity.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Operational scale comes from standardized products, controlled data and reliable handoffs - not from heroics.

I6

Financial model

CHAPTER

The financial case should be judged on conservative mandate conversion, disciplined hiring and the ability to preserve liquidity through a slow transaction cycle.

O1

Use scenario ranges rather than a single-point forecast.

O2

Separate recurring, retainer and success-fee economics.

O3

Release investment only when commercial and control evidence is achieved.

Five-year base case

The illustrative base case reaches scale through Banking fees, recurring Corporate Finance and later Markets contribution.

- BUILD**
Model revenue of approximately \$4.5M, \$14M, \$31M, \$52M and \$76M across Years 1-5.
- GUARDRAIL**
Figures are management assumptions, not forecasts; update for actual pipeline, hiring and permissions.
- BOARD MEASURE**
Revenue, gross margin, EBITDA, cash burn and risk-adjusted return.

OPERATING VIEW | ILLUSTRATIVE

The model must be transparent enough for the board to change one assumption and understand the capital, staffing and timing consequences.

Revenue mix

A healthier franchise reduces dependence on binary success fees as recurring services and retainers scale.

- **BUILD**
Target an evolution from transaction-heavy revenue toward a balanced mix of advisory, recurring finance and distribution.
- **GUARDRAIL**
Do not count uncontracted success fees or unapproved products in committed revenue.
- **BOARD MEASURE**
Recurring share, retainer coverage, success-fee concentration and backlog quality.

OPERATING VIEW | ILLUSTRATIVE

The model must be transparent enough for the board to change one assumption and understand the capital, staffing and timing consequences.

Banking unit economics

Banking profitability depends on senior productivity, realistic staffing and fee discipline.

● BUILD

Model each mandate by probability, duration, staffing, direct cost, partner share and collection risk.

● GUARDRAIL

Require engagement economics review for discounted, contingent or conflict-sensitive fees.

● BOARD MEASURE

Fees per senior banker, realized rate, hours, direct margin and collections.

OPERATING VIEW | ILLUSTRATIVE

Mandates

Average fee

Senior capacity

Contribution margin

The model must be transparent enough for the board to change one assumption and understand the capital, staffing and timing consequences.

Corporate Finance unit economics

Recurring engagements can provide attractive visibility if scope and utilization are controlled.

- **BUILD**

Package service tiers with monthly fees, defined deliverables, change requests and executive oversight.

- **GUARDRAIL**

Avoid open-ended scope and chronic overtime that hides negative client-level margins.

- **BOARD MEASURE**

Monthly recurring revenue, gross margin, renewal, utilization and scope expansion.

OPERATING VIEW | ILLUSTRATIVE

The model must be transparent enough for the board to change one assumption and understand the capital, staffing and timing consequences.

Markets unit economics

Markets contribution should be modeled net of partner economics, data, compliance and operational costs.

- BUILD**
Use activity-based economics for research, corporate access, placements and any later agency execution.
- GUARDRAIL**
Exclude volume assumptions until permissions, investor demand and partner capacity are evidenced.
- BOARD MEASURE**
Revenue per investor, distribution take rate, partner share and control cost.

OPERATING VIEW | ILLUSTRATIVE

Gross view

- Placement fee
- Partner share
- Research value
- Data cost

Net view

- Flow revenue
- Surveillance
- Client demand
- Capital cost

The model must be transparent enough for the board to change one assumption and understand the capital, staffing and timing consequences.

Cost base

Compensation is the largest cost; technology, legal, insurance, data and regulatory infrastructure are also material.

- BUILD**
Build fixed and variable cost by role, legal entity, vendor and launch phase.
- GUARDRAIL**
Include contingency for regulatory delays, recruiting premiums, cyber insurance and remediation.
- BOARD MEASURE**
Compensation ratio, fixed-cost coverage, vendor run rate and contingency use.

OPERATING VIEW | ILLUSTRATIVE

The model must be transparent enough for the board to change one assumption and understand the capital, staffing and timing consequences.

Scenario analysis

The downside case should assume delayed licensing, lower conversion, deferred M&A; and slower hiring recovery.

BUILD

Model base, upside, downside and severe scenarios with management actions and funding triggers.

GUARDRAIL

No scenario may assume immediate cost removal where contracts, severance or regulatory obligations prevent it.

BOARD MEASURE

Runway, break-even month, cumulative funding and trigger proximity.

OPERATING VIEW | ILLUSTRATIVE

The model must be transparent enough for the board to change one assumption and understand the capital, staffing and timing consequences.

Break-even bridge

Operating break-even during Year 3 is achievable only if recurring revenue grows and headcount remains gated.

● BUILD

Track monthly contribution by division and defer discretionary scaling when backlog or cash conversion weakens.

● GUARDRAIL

Board reporting should distinguish accounting profit, cash flow and regulatory-capital needs.

● BOARD MEASURE

Monthly EBITDA, operating cash, regulatory capital and fee receivables.

OPERATING VIEW | ILLUSTRATIVE

The model must be transparent enough for the board to change one assumption and understand the capital, staffing and timing consequences.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve the illustrative base, upside, downside and severe scenarios.
- O2** Require quarterly reforecasting and account-level pipeline evidence.
- O3** Tie hiring and technology releases to liquidity and backlog gates.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

The model must be transparent enough for the board to change one assumption and understand the capital, staffing and timing consequences.

I7

Capital and funding

CHAPTER

RMH Capital requires enough committed funding to reach a defensible operating state, satisfy entity obligations and withstand a delayed revenue cycle.

O1

Separate operating liquidity, regulatory capital and contingency reserves.

O2

Fund in tranches against objective milestones.

O3

Preserve a clear stop-loss and orderly wind-down path.

Funding requirement

The illustrative three-year funding envelope is \$25M-\$30M, including operating build, regulatory work and contingency.

- **BUILD**
Commit the envelope conceptually but release capital through Phase 0, launch and scale tranches.
- **GUARDRAIL**
Final funding depends on entity structure, approved activities, net-capital requirements and partner terms.
- **BOARD MEASURE**
Committed funding, drawn funding, remaining runway and milestone completion.

Phase 0 / 1 request

A capped \$7.5M initial authorization can fund validation, founding hires, counsel, applications and core systems.

● BUILD

Release in monthly or milestone-based increments under CFO and board oversight.

● GUARDRAIL

Unused authorization is not a spending target; material reallocation requires approval.

● BOARD MEASURE

Spend versus plan, committed contracts, hiring progress and gate evidence.

OPERATING VIEW | ILLUSTRATIVE

Measure	Limit	Owner	Status
Budget	Green	CEO	ON TRACK
Founding hires	Amber	CRO	WATCH
Application	Red	COO	GATE
Client validation	N/A	CFO	READY
Core systems	Green	CCO	OPEN

Capital discipline is strategic discipline: the venture should never be forced into poor client or risk decisions to meet payroll.

Regulatory capital

Any broker-dealer entity must maintain required net capital and operational discipline separate from group cash.

● BUILD

Model capital requirements with counsel and FINOP expertise under the exact membership scope.

● GUARDRAIL

Regulatory capital is not available for general group use and requires daily or periodic monitoring as applicable.

● BOARD MEASURE

Excess net capital, early-warning levels, withdrawals and forecast buffer.

OPERATING VIEW | ILLUSTRATIVE

Early-warning buffer

Regulatory capital

Restricted reserves

Operating cash

Group liquidity

Capital discipline is strategic discipline: the venture should never be forced into poor client or risk decisions to meet payroll.

Liquidity policy

A minimum operating runway protects client service and negotiation leverage through volatile fee cycles.

● BUILD

Set minimum cash, stress buffer, receivable limits, commitment controls and contingency actions.

● GUARDRAIL

Escalate before minimum thresholds are breached; do not rely on success fees with uncertain close dates.

● BOARD MEASURE

Months of runway, stress buffer, receivables aging and committed outflows.

OPERATING VIEW | ILLUSTRATIVE

Cash

Receivables

Commitments

Stress

Capital discipline is strategic discipline: the venture should never be forced into poor client or risk decisions to meet payroll.

Capital allocation

Capital should flow first to required controls, high-quality talent and reusable client infrastructure.

- BUILD**
Rank investments by regulatory necessity, strategic differentiation, client demand, economics and reversibility.
- GUARDRAIL**
Do not prioritize brand, office or speculative product spend over control readiness.
- BOARD MEASURE**
Spend by priority, realized benefit, write-offs and reallocation.

OPERATING VIEW | ILLUSTRATIVE

Capital discipline is strategic discipline: the venture should never be forced into poor client or risk decisions to meet payroll.

Insurance program

Professional liability, cyber, D&O, crime and employment coverage are core risk-transfer tools but do not replace controls.

- **BUILD**

Design coverage with brokers experienced in investment-banking and technology risk.

- **GUARDRAIL**

Review exclusions, retroactive dates, limits, deductibles, notification duties and vendor dependencies.

- **BOARD MEASURE**

Coverage adequacy, premium, exclusions, claims and control requirements.

OPERATING VIEW | ILLUSTRATIVE

Employment

Crime

Cyber

E&O; / professional

D&O;

Capital discipline is strategic discipline: the venture should never be forced into poor client or risk decisions to meet payroll.

Stop-loss framework

The board needs predefined points to pause, resize or stop the venture before capital is exhausted.

● BUILD

Set triggers for licensing delay, pipeline failure, cost overrun, leadership gaps, control events and liquidity.

● GUARDRAIL

Trigger decisions require independent finance and risk analysis, not only sponsor judgment.

● BOARD MEASURE

Trigger status, corrective actions, time to decision and capital preserved.

OPERATING VIEW | ILLUSTRATIVE

Capital discipline is strategic discipline: the venture should never be forced into poor client or risk decisions to meet payroll.

Orderly wind-down

A credible exit plan protects clients, records, employees, regulators and the RMH brand.

BUILD

Document mandate transition, client notice, records retention, vendor termination, capital and personnel actions.

GUARDRAIL

Regulated obligations and customer interests continue through closure; wind-down cannot be improvised.

BOARD MEASURE

Wind-down funding, critical dependencies, transition time and record completeness.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Capital discipline is strategic discipline: the venture should never be forced into poor client or risk decisions to meet payroll.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve the \$25M-\$30M planning envelope and \$7.5M initial cap.
- O2** Separate operating, contingency and regulatory-capital resources.
- O3** Adopt explicit stop-loss and wind-down triggers.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Capital discipline is strategic discipline: the venture should never be forced into poor client or risk decisions to meet payroll.

I8

Go-to-market

CHAPTER

Go-to-market should be account-led, sector-specific and evidence-driven, with senior bankers converting trusted relationships rather than broad paid marketing.

O1

Start with named clients and specific decision moments.

O2

Use RMH content and community selectively, with strict confidentiality boundaries.

O3

Build a repeatable funnel from insight to relationship to mandate.

Named-account strategy

The initial market can be built around a finite list of high-fit companies, investors and ecosystem partners.

● BUILD

Develop 100 priority accounts, 300 broader prospects and relationship maps for key decision-makers.

● GUARDRAIL

Account plans must record conflicts, communication permissions and ownership.

● BOARD MEASURE

Coverage depth, qualified meetings, active opportunities and mandate conversion.

OPERATING VIEW | ILLUSTRATIVE

Commercial momentum should come from useful points of view and excellent execution - never from exaggerated reach or unapproved product claims.

Sector thesis engine

Original sector perspectives create relevant conversations before a transaction is public.

BUILD

Publish quarterly theses connecting operating shifts, transaction patterns, capital and strategic implications.

GUARDRAIL

Research review and disclosures must prevent promotional, misleading or MNPI-based content.

BOARD MEASURE

Thesis engagement, executive meetings, sourced opportunities and research corrections.

OPERATING VIEW | ILLUSTRATIVE

Commercial momentum should come from useful points of view and excellent execution - never from exaggerated reach or unapproved product claims.

Founder and board programs

Small, trusted forums can position RMH as a long-term advisor rather than a deal intermediary.

● BUILD

Run private roundtables on capital planning, M&A; readiness, AI economics and governance.

● GUARDRAIL

Use invitation, recording, confidentiality and expert-participation protocols.

● BOARD MEASURE

Attendance quality, follow-ups, satisfaction and opportunities created.

OPERATING VIEW | ILLUSTRATIVE

Commercial momentum should come from useful points of view and excellent execution - never from exaggerated reach or unapproved product claims.

Referral ecosystem

Law firms, accounting firms, investors, executives and operators can provide high-quality referrals.

● BUILD

Create partner coverage, value exchange, feedback and attribution without improper compensation.

● GUARDRAIL

Review referral fees, solicitor arrangements, gifts and conflicts under applicable rules.

● BOARD MEASURE

Referral volume, quality, conversion, concentration and compliance review.

OPERATING VIEW | ILLUSTRATIVE

Commercial momentum should come from useful points of view and excellent execution - never from exaggerated reach or unapproved product claims.

Content and brand

The RMH design language can differentiate the brand while institutional content builds credibility.

- **BUILD**
Use clear visual storytelling, sector evidence, founder empathy and restrained claims across digital channels.
- **GUARDRAIL**
All regulated communications follow approval, disclosure, archiving and fair-presentation requirements.
- **BOARD MEASURE**
Qualified engagement, corrections, approval time and brand trust.

Proposal discipline

Proposals should connect client decisions, workplan, team, fees, conflicts and measurable outcomes.

BUILD

Use modular proposal components with tailored hypotheses and transparent scope.

GUARDRAIL

No unsupported credentials, guaranteed outcomes or ambiguous success-fee mechanics.

BOARD MEASURE

Proposal-to-mandate conversion, cycle time, fee discount and scope variance.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Commercial momentum should come from useful points of view and excellent execution - never from exaggerated reach or unapproved product claims.

Pipeline governance

A common qualification framework improves forecast quality and prevents resource capture by low-probability pursuits.

- BUILD**
Score strategic fit, client access, decision urgency, fee, competition, risk and next evidence.
- GUARDRAIL**
Revenue forecasts exclude opportunities without verified decision-maker access and defined next steps.
- BOARD MEASURE**
Stage aging, conversion, forecast accuracy and lost-opportunity reasons.

OPERATING VIEW | ILLUSTRATIVE

Measure	Limit	Owner	Status
Fit	Green	CEO	ON TRACK
Access	Amber	CRO	WATCH
Urgency	Red	COO	GATE
Economics	N/A	CFO	READY
Risk	Green	CCO	OPEN

Commercial momentum should come from useful points of view and excellent execution - never from exaggerated reach or unapproved product claims.

Launch communications

A controlled launch should establish credibility without creating demand beyond delivery capacity.

- BUILD**
Sequence board approval, leadership announcement, client briefings, flagship research and selective events.
- GUARDRAIL**
Public statements must match legal entity status, registrations and actual capabilities at each date.
- BOARD MEASURE**
Qualified inbound, capacity, message accuracy and launch issues.

OPERATING VIEW | ILLUSTRATIVE

Commercial momentum should come from useful points of view and excellent execution - never from exaggerated reach or unapproved product claims.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve a named-account, senior-led commercial model.
- O2** Authorize sector research and private forums under communications controls.
- O3** Require pipeline qualification and capacity gates before broad launch.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Commercial momentum should come from useful points of view and excellent execution - never from exaggerated reach or unapproved product claims.

I9

Implementation roadmap

CHAPTER

The build should progress through explicit stages: validate, form, license, pilot, launch and scale, with board gates at every irreversible commitment.

O1

Sequence dependencies before announcing dates.

O2

Run commercial, regulatory, people and technology workstreams in parallel.

O3

Use evidence-based gates and a standing program office.

Phase 0: 120-day validation

The first phase should test demand, leadership availability, regulatory pathway, partners, economics and brand fit.

- BUILD**
Complete 30 client interviews, founding-team search, counsel perimeter memo, partner RFP and revised financial case.
- GUARDRAIL**
Do not sign long-term infrastructure commitments before the target scope and legal path are validated.
- BOARD MEASURE**
Deliverables complete, client evidence, candidate slate, cost confidence and board decision.

OPERATING VIEW | ILLUSTRATIVE

Implementation success is measured by readiness and risk reduction, not activity volume or optimistic target dates.

Formation workstream

Legal entities, governance, capital, tax and service agreements must be established coherently.

- BUILD**
Form entities, appoint boards, open accounts, document intercompany services and create entity records.
- GUARDRAIL**
Entity names and public materials cannot imply permissions that are not yet effective.
- BOARD MEASURE**
Entity milestones, open agreements, capital plan and governance readiness.

OPERATING VIEW | ILLUSTRATIVE

One accountable workflow. Explicit gates. Complete evidence.

Implementation success is measured by readiness and risk reduction, not activity volume or optimistic target dates.

Regulatory workstream

Application quality depends on a stable business plan, qualified principals, realistic financials and tailored procedures.

● BUILD

Complete activity inventory, membership strategy, applications, WSPs, licensing and regulator responses.

● GUARDRAIL

Changes during review are controlled and evaluated for application impact.

● BOARD MEASURE

Submission date, regulator requests, response time, licensing and open conditions.

OPERATING VIEW | ILLUSTRATIVE

Implementation success is measured by readiness and risk reduction, not activity volume or optimistic target dates.

Commercial workstream

Commercial validation should produce qualified relationships and pilot-ready engagements without crossing regulatory boundaries.

BUILD

Build sector theses, named accounts, founder conversations, advisory pilots and partner referral channels.

GUARDRAIL

Use pre-launch scripts and legal review to separate general consulting from regulated solicitation.

BOARD MEASURE

Qualified prospects, pilot engagements, launch backlog and conversion evidence.

OPERATING VIEW | ILLUSTRATIVE

Implementation success is measured by readiness and risk reduction, not activity volume or optimistic target dates.

People workstream

Leadership and supervisor availability can be the critical path.

- BUILD**
Recruit CEO, CCO, CRO/COO, FINOP-capable finance expertise and founding business heads in sequence.
- GUARDRAIL**
Conditional offers reflect licensing, background review, conflicts and authorization dependencies.
- BOARD MEASURE**
Accepted leaders, licensing status, start dates and succession coverage.

OPERATING VIEW | ILLUSTRATIVE

Implementation success is measured by readiness and risk reduction, not activity volume or optimistic target dates.

Technology workstream

Core controls and records must precede client-facing feature breadth.

- BUILD**
Implement identity, CRM, onboarding, conflicts, workflow, archiving, finance and client workspace in releases.
- GUARDRAIL**
No production launch without security testing, data migration controls and operating support.
- BOARD MEASURE**
Release readiness, defects, control testing, user acceptance and recovery test.

OPERATING VIEW | ILLUSTRATIVE

Implementation success is measured by readiness and risk reduction, not activity volume or optimistic target dates.

Launch readiness review

A formal readiness review should independently confirm people, permissions, procedures, systems and liquidity.

- BUILD**
Use a launch checklist with evidence owners, control testing, scenario exercises and open-condition thresholds.
- GUARDRAIL**
Revenue targets do not override unresolved critical or high-risk launch conditions.
- BOARD MEASURE**
Critical conditions, test pass rate, open issues and independent assurance opinion.

OPERATING VIEW | ILLUSTRATIVE

Measure	Limit	Owner	Status
Permissions	Green	CEO	ON TRACK
People	Amber	CRO	WATCH
Procedures	Red	COO	GATE
Systems	N/A	CFO	READY
Liquidity	Green	CCO	OPEN

Implementation success is measured by readiness and risk reduction, not activity volume or optimistic target dates.

Scale roadmap

After launch, expansion should follow demonstrated client demand, control performance and financial capacity.

- BUILD**
Sequence additional sector pods, placements, research, agency execution and geographic reach through separate gates.
- GUARDRAIL**
Every scale decision includes post-launch review and capacity assessment.
- BOARD MEASURE**
Gate outcomes, product economics, incident trend, capital and client adoption.

OPERATING VIEW | ILLUSTRATIVE

Implementation success is measured by readiness and risk reduction, not activity volume or optimistic target dates.

Board checkpoint

Decisions to carry forward before the next chapter of the build.

DECISIONS

- O1** Approve the 120-day validation sprint and standing program office.
- O2** Require formal readiness evidence before any public regulated launch.
- O3** Reserve product, geographic and principal-risk expansion for new board gates.

PROCEED ONLY WHEN

- Y** The accountable executive and independent control owner are named.
- Y** The activity, legal entity, permissions, workflow and evidence are documented.
- Y** The economics remain attractive under a downside case and liquidity remains above threshold.

Implementation success is measured by readiness and risk reduction, not activity volume or optimistic target dates.

20 Board decision and appendices

CHAPTER

The board is being asked to authorize a controlled validation and build program - not to pre-approve an unrestricted investment bank.

O1

Approve the concept, funding cap and governance framework.

O2

Condition launch on regulatory, control, talent and commercial evidence.

O3

Retain explicit rights to pause, resize or stop.

Proposed board resolution

The board can approve Phase 0/1 while preserving future decisions on regulated launch and scale.

- BUILD**
Authorize up to \$7.5M, formation planning, specialist advisers, founding recruitment and systems procurement within delegated limits.
- GUARDRAIL**
No regulated activity, customer assets, principal trading, underwriting or lending is authorized by this resolution.
- BOARD MEASURE**
Resolution conditions, delegated spend, reporting cadence and next approval date.

OPERATING VIEW | ILLUSTRATIVE

Measure	Limit	Owner	Status
Funding cap	Green	CEO	ON TRACK
Scope boundary	Amber	CRO	WATCH
Governance	Red	COO	GATE
Reporting	N/A	CFO	READY
Next gate	Green	CCO	OPEN

The decision should balance strategic option value with a hard commitment to client protection, regulatory integrity and capital discipline.

Conditions precedent to launch

Launch should occur only after five evidence packages are complete and independently reviewed.

- BUILD**
Require permissions, qualified leaders, tested controls, adequate liquidity and contracted critical partners.
- GUARDRAIL**
Any critical gap requires delay or explicit board-approved remediation and compensating controls.
- BOARD MEASURE**
Evidence status, independent sign-off, residual risk and open conditions.

OPERATING VIEW | ILLUSTRATIVE

The decision should balance strategic option value with a hard commitment to client protection, regulatory integrity and capital discipline.

Board dashboard

Monthly reporting should show progress and risk with enough precision to support intervention.

- BUILD**
Report capital, hiring, regulatory milestones, commercial validation, technology, issues and decisions required.
- GUARDRAIL**
Use consistent definitions, trend lines and threshold-based escalation.
- BOARD MEASURE**
Gate status, cash, pipeline, high issues and board actions.

OPERATING VIEW | ILLUSTRATIVE

Capital

Regulatory

Commercial

Readiness

The decision should balance strategic option value with a hard commitment to client protection, regulatory integrity and capital discipline.

Key assumptions register

The business case depends on assumptions that must be visible, owned and tested.

- BUILD**
Track licensing duration, hiring, fee conversion, revenue timing, partner cost, compensation and technology delivery.
- GUARDRAIL**
Assumptions are refreshed when evidence changes; downside impact is quantified.
- BOARD MEASURE**
Assumptions validated, variance, sensitivity and management response.

OPERATING VIEW | ILLUSTRATIVE

Measure	Limit	Owner	Status
Licensing	Green	CEO	ON TRACK
Hiring	Amber	CRO	WATCH
Conversion	Red	COO	GATE
Costs	N/A	CFO	READY
Delivery	Green	CCO	OPEN

The decision should balance strategic option value with a hard commitment to client protection, regulatory integrity and capital discipline.

Risk and decision register

The board should see the most consequential unresolved decisions, not only project activity.

- BUILD**
Maintain a living register of risks, choices, owners, deadlines, alternatives and escalation thresholds.
- GUARDRAIL**
Material decisions cannot be closed without recorded rationale and conditions.
- BOARD MEASURE**
Open decisions, aging, risk trend, conditions and residual exposure.

OPERATING VIEW | ILLUSTRATIVE

The decision should balance strategic option value with a hard commitment to client protection, regulatory integrity and capital discipline.

Source and benchmark notes

The proposal draws on RMH public materials, official US regulatory guidance and public institutional-bank operating models.

- BUILD**
Use sources as directional benchmarks; counsel and appointed executives must tailor the final design.
- GUARDRAIL**
No third-party logo, proprietary trade dress or confidential material is reproduced.
- BOARD MEASURE**
Source currency, legal review, benchmark relevance and documented departures.

OPERATING VIEW | ILLUSTRATIVE

The decision should balance strategic option value with a hard commitment to client protection, regulatory integrity and capital discipline.

Important: this is a strategic management proposal, not legal, tax, accounting, investment or regulatory advice. Final design must be validated by appointed executives, counsel, regulators and the board.

Final recommendation

Proceed with a disciplined, capital-light build of RMH Capital, subject to 120-day validation and formal launch re-approval.

- BUILD**
Start with Investment Banking and Corporate Finance; build Markets as intelligence and distribution; make RMH Intelligence the operating layer.
- GUARDRAIL**
Protect the RMH brand through narrow permissions, independent controls, partner infrastructure and explicit stop-loss triggers.
- BOARD MEASURE**
Board vote, executive sponsor, funding release, next gate date and accountabilities.

OPERATING VIEW | ILLUSTRATIVE

The decision should balance strategic option value with a hard commitment to client protection, regulatory integrity and capital discipline.

Authorize the initial build

Approve a capped \$7.5M validation and build program, appoint accountable leadership, and require a separate go/no-go vote before regulated launch.

01

CAPITAL

\$7.5M initial authorization within a \$25M-\$30M three-year planning envelope.

02

GOVERNANCE

Executive sponsor, founding CEO search and Board Risk & Conduct Committee.

03

BOUNDARY

No regulated activity, customer assets, principal trading, underwriting or lending without later approval.

Decision requested: approve / approve with conditions / decline
