WHY NOW

Software stopped being enough.

For decades, business software just stored information and waited for a human to act on it. AI changes the unit of work — agents can now do the task, not just track it. Every industry is about to rebuild its operations around that. Almost no one has built the platform underneath.

01

The work moves to the model

Scheduling, billing, support, dispatch, follow-ups — agents handle the operational load end to end, around the clock.

02

Vertical software is fragmented

Every industry runs on a stack of thin, disconnected tools — and almost none of them are actually intelligent.

03

The operating layer wins

Whoever owns the layer the business runs on owns the industry. We build it industry-agnostic from day one.

THE PRODUCT

An AI workforce, and the OS it runs on.

The Everything Platform isn't another dashboard. It's a team of AI agents that operate a business — unified on one system of record, and shaped to how each industry actually works.

AGENTS

They do the work

A 24/7 team of AI agents that handle the operational load of running a business — not just track it. Humans stay in control; agents handle the volume.

ONE OS

Every workflow, unified

CRM, scheduling, billing, support, and analytics on a single source of truth — so agents and your team work from the same reality.

VERTICAL PACKS

Shaped to your industry

Out of the box, the platform speaks your industry — its workflows, its data, its compliance — through configurable packs.

THE DEEPTECH

The Everything Engine.

Our moat isn't a feature list — it's the engine underneath. A proprietary system that lets one platform act intelligently across any industry, and get sharper with every business it serves.

SURFACE · PER INDUSTRY

Vertical Packs

Industry-specific workflows, data models, and agent skills — configured, not rebuilt.

CORE · PROPRIETARY

Agent Orchestration

Plans, routes, and executes multi-step work with human-in-the-loop control.

INTELLIGENCE

Domain-Tuned Models · Evals · Tools

Compact models fine-tuned per vertical — cheaper and sharper than general LLMs. Every action tested and reversible.

COMPOUNDING ADVANTAGE

The Data Flywheel

Every business we serve makes the engine better for the next — within a vertical and across them.

Why it's defensible

Real R&D, not a thin wrapper. Competitors copy a feature; they can't copy four years of compounding data and evals.

Why it scales

Each new pack ships faster than the last — we configure one platform, not rebuild a company per industry.

LAND & EXPAND

Built for one industry. Then every industry.

We win a beachhead, template it, and repeat. We start where the pain is sharpest and the ROI is obvious — home & field services — then expand pack by pack on a shared engine.

VERTICAL PACKS

Home & Field Services · 2026

Fitness & Wellness

Clinics & Health

Legal

Real Estate

Logistics

...

2026 — Beachhead

Win home & field services: dispatch, scheduling, quoting, billing, and customer comms run by agents.

2027 — Templating

Public launch in the beachhead, then ship two adjacent packs reusing 80% of the engine.

2028+ — Velocity

A new vertical pack roughly every quarter, each cheaper and faster than the last.

THE MARKET

A market measured in trillions, still run on spreadsheets.

Service businesses are the backbone of the economy and the most underserved by software. As AI absorbs labor budgets, software's addressable spend expands dramatically.

TAM

\$1.5T+

Global SMB software & services spend — expanding as AI absorbs work once done by people.

SAM

\$180B

Operations software for service businesses across our target verticals.

SOM · 5-YR

\$300M

A realistic, winnable share across the beachhead plus the first wave of packs.

Market figures are a planning model, not researched estimates — to be pressure-tested as we learn.

BUSINESS MODEL

SaaS that scales with the work it does.

A predictable subscription for the platform, plus usage-based pricing for AI actions. As our own models get cheaper to run, margins expand with us.

Starter

\$149 /mo

For a single small business getting its first AI hires.

- 1 vertical pack
- Core agents
- Included AI actions
- Email support

Growth

\$499 /mo

For growing operators running on the platform.

- All agents & workflows
- Integrations & analytics
- Higher AI quota
- Multi-seat & roles
- Priority support

Enterprise

Custom

For multi-location operators & partners.

- Custom vertical packs
- Private models
- SSO / SAML, SLA
- Solutions support

Usage

AI actions metered above quota

70%+

Target gross margin by 2030

120%+

Net revenue retention goal

Land & expand

One pack → the full OS

THE NUMBERS

From design partners to category leader.

A four-year path from a handful of design partners to roughly \$10M ARR — driven by adding paying businesses and expanding each across packs.

~\$10M ARR · end 2030	~1,700 Paying businesses	~60K Active seats	~\$490 Blended ARPA / mo
---------------------------------	------------------------------------	-----------------------------	------------------------------------

2026	10 design partners · prove the core loop	~\$6K
2027	Public launch · ~120 businesses · beachhead PMF	~\$430K
2028	~400 businesses · ship 2nd & 3rd packs	~\$1.4M
2029	~1,000 businesses · multi-vertical engine	~\$4.8M
2030	~1,700 businesses · category leader	~\$10M

THE PLAN

Four years, in phases.

Phase 0

Jul–Sep 2026

Foundations

Repo, CI/CD, auth, the engine's first version. Land three design partners in home & field services.

Phase 1–2

Q4 2026 – Q1 2027

Core loop & private beta

Ship the end-to-end agent loop. Self-serve onboarding. Start charging. First churn, first saves.

Phase 3–4

2027

Public launch & the wedge

Launch publicly, find the workflow customers love most, and double down. Build-in-public flywheel on.

Phase 5–6

Late 2027 – 2028

First hire & the engine

Repeatable acquisition channel. Ship packs two and three on the shared engine. SOC 2 begins.

Phase 7–9

2028 – 2030

Multi-vertical & category leadership

A new pack roughly each quarter. Clean retention. Become the default operating layer.

THE TEAM

Five people. Unusual range.

A small, technical founding team covering the full stack — from infrastructure to models to product to brand.

Mahmoud Said

Backend Architect · Systems

Owns the platform's core — infrastructure, databases, APIs, and the reliability that lets us scale without breaking.

Vibe: Calm under load · Boba: Classic milk tea, 50% sugar, extra boba

Alex Wu (you)

Chief Vibe Officer · Frontend & Design

Owns product design, the front end, brand, and how the company shows up — including build-in-public growth.

Vibe: Caffeinated chaos · Boba: Taro milk tea, extra pearls, 100% ice

Michael Huang

ML & Data Engineer

Owns the deeptech core — the domain-tuned models, recommendation systems, and data pipelines.

Vibe: Quiet genius · Boba: Matcha latte, light sugar, oat milk

Sohum Joshi

Full Stack · DevOps

The connective tissue — ships features end to end and keeps deployment fast, continuous, unbreakable.

Vibe: Always on · Boba: Brown sugar boba + espresso shot

Kaikai Du

Product Manager · Tech Lead

Owns what we build and when — specs, priorities, and the discipline that turns ideas into shipped product.

Vibe: Runs the whole thing · Boba: Wintermelon tea, lychee jelly

HOW WE OPERATE

Principles, not process.

Ship or shut up

Every week, one thing goes out — code, a prototype, a post, a pitch. The streak is the discipline. Momentum compounds.

Build in public

We document the build openly. Honesty over hype — our cheapest, most durable growth channel.

Default to the customer

When in doubt, ship the thing the design partner would be upset to lose. The roadmap lives closest to the work.

Celebrate in pearls

Every sprint retro ends with a boba run — on Alex. Wins get marked, the team stays caffeinated, the grind stays human.

THE RAISE

Raising a \$1.5M pre-seed.

Eighteen months of runway to reach product-market fit in our beachhead, ship the first three vertical packs, and cross \$500K ARR — then raise a seed from a position of strength.

USE OF FUNDS

WHAT IT UNLOCKS

UNLOCKS

Public launch

Beachhead product live, self-serve, charging revenue.

UNLOCKS

\$500K ARR

Beachhead PMF with real retention and a working channel.

UNLOCKS

3 vertical packs

The engine proven across more than one industry — thesis de-risked.

\$1.5M pre-seed

~18-month runway

Alt: bootstrap on design-partner revenue

THE VISION

Every business, running on one platform.

We start with one industry. We don't stop there.
